Moreover the criteria for how to determine if a car is worth the investment is delineated in this essay Furthermore how to earn substantial money online so that you can afford to finance your electric vehicle purchase is expounded upon in this essay In spite of their touted merits electric cars unequivocally do not warrant the investment Even though electric cars operate more efficiently than gasoline powered vehicles and can therefore save you money on fuel costs and vehicle maintenance services these vehicle running costs savings reaped over the course of ample years will not be substantial enough to even offset 50% of the exorbitant premium paid upfront to procure the electric vehicle over a gasoline powered vehicle Electric vehicles tend to rapidly depreciate in value and are therefore not a prudent investment in your future Moreover charging times for an electric vehicle are long electricity prices are on the rise the lithium ion battery in electric vehicles is deemed a potential fire hazard and there is a lack of electric vehicle service centers which ultimately means that there are an abject lack of technicians who are competent in servicing electrical vehicles Even though the cost of operating an electric vehicle if you already paid for it in full would be roughly one third of the cost of operating a gasoline powered vehicle these savings reaped overtime on vehicle running costs such as vehicle maintenance costs and fuel costs do not offset the premium of 20 000 50 000 exhausted upfront to procure an electric vehicle over a gasoline powered vehicle The average cost of an electric vehicle is 55 000 while the average cost of a gasoline powered four door sedan is 35 000 Even though the engine of an electric vehicle has less moving parts such as fan belts and spark plugs which saves you money on replacement parts and service costs every year the average yearly savings in maintenance for an electric vehicle owner is only approximately 800 a year Electric Cars VS 2019 even though you may have to pay a premium of at least 20 000 upfront to procure an electric vehicle over a gasoline powered vehicle As per operating costs to drive the vehicle the breakdown for a gas powered car VS an electric car comes out to be 9 83 per 100 miles for a gas car and 5 27 per 100 miles for an electric vehicle When directly compared the cost to power an electric vehicle is about half of what it costs to fuel your gas powered car It is important to note that pricing for power varies depending on your utility company and how they charge for power For example some utility companies charge higher Time Of Use TOU rates for things like peak hour usage where the price of power is higher between 4 pm and 9 pm Electric Cars VS 2019 While this may seem enticing to be able to save on fuel costs by owning an electric vehicle you will not drive your electric vehicle enough to defray the 20 000 premium paid to procure it over a gasoline powered vehicle by saving on fuel costs and vehicle maintenance costs Much to the chagrin of electric vehicle owners electric vehicles are not the most economical vehicles to own Owning and operating a new vehicle in 2017 costed a driver an average of 8 469 annually or 706 each month according to a new study from AAA The annual evaluation of driving costs reveals that small sedans are the least expensive vehicles to drive at 6 354 annually followed by small SUVs at 7 606 annually and hybrids at 7 687 annually New to the Your Driving Costs study in 2017 AAA found that electric vehicles have driving costs at 8 439 per year Without a gasoline engine to maintain electric vehicles have the lowest annual maintenance
