There are plenty of definitions to be found online

Let's take a look at a couple of the more popular ones

This is what the project's home page has to say

Node.js is a JavaScript runtime built on Chrome's V8 JavaScript engine

And this is what Stack Overflow has to offer

Node.js is an event based non blocking asynchronous I/O runtime that uses Google's V8 JavaScript engine and libuv library

Hmmm event based non blocking asynchronous I/O that's quite a lot to digest in one go

So let's approach this from a different angle and begin by focusing on the other detail that both descriptions mention the V8 JavaScript engine

Node.js is Built on Google Chrome's V8

JavaScript EngineThe V8 engine is the open source JavaScript engine that runs in Google Chrome and other Chromium based web browsers including Brave Opera and Vivaldi It was designed with performance in mind and is responsible for compiling JavaScript directly to native machine code that your computer can execute However when we say that Node is built on the V8 engine we don t mean that Node programs are executed in a browser They aren t Rather the creator of Node Ryan Dahl took the V8 engine and enhanced it with various features such as a file system API an HTTP library and a number of operating system related utility methods This means that Node js is a program we can use to execute JavaScript on our computers In other words it s a JavaScript runtime How Do I Install Node js In this next section we ll install Node and write a couple of simple programs We ll also look at npm a package manager that comes bundled with Node Node Binaries vs Version ManagerMany websites will recommend that you head to the official Node download page and grab the Node binaries for your system While that works I would suggest that you use a version manager instead This is a program that allows you to install multiple versions of Node and switch between them at will There are various advantages to using a version manager For example it negates potential permission issues when using Node with npm and lets you set a Node version on a per project basis If you fancy going the version manager route please consult our quick tip Install Multiple Versions of Node js using nvm Otherwise grab the correct binaries for your system from the link above and install those
