Assessment in Medical Education and Training Neil Jackson, Alex Jamieson, Anwar Khan, 2023-07-14 This work contains a foreword by Dame Lesley Southgate, President Royal Free and University College Medical School London. Assessment is a key method of improving standards as well as establishing competency. However, despite major developments in the assessment of clinical competence in the last two decades, there is still more bad practice.

and ignorance of significant issues in this area than any other aspect of medical higher education. This book comprehensively covers all aspects of assessment. It considers current and future policy and practice including the Modernising Medical Careers training programme. It promotes a system incorporating more meaningful assessments rather than just tests of knowledge and skill. Assessment in Medical Education and Training will be useful to everyone involved in healthcare education including tutors, trainers, clinical supervisors and assessors in both primary and secondary care. It will also be important reading for consultants and general practitioners with responsibility for registrars and healthcare education policy makers and shapers. Acquisition of knowledge and skills is not sufficient alone; we need to be able to apply the knowledge, skills and strategies learnt and in turn these can be the appropriate targets of assessment. There is a movement away from traditional multiple choice tests to assessments that include a wide variety of methods and so provide for more meaningful assessments which can better capture significant outcomes in order to assure their future success. Neil Jackson, Alex Jamieson and Anwar Khan in the Introduction. This thoughtful, provocative and eclectic book is published at a time of enormous change in the content, structure and quality assurance of postgraduate medical education in the United Kingdom. and medical students seeking coverage on major and high profile issues in medical education Postgraduate Medical Education and Training Postgraduate Medical Education and Training Board,2002 *Curriculum Design, Evaluation, and Teaching in Medical Education* Jochanan Benbassat,2024-12-06 This concise and challenging examination of medical education aims to discuss curriculum design and evaluation in medical schools and to take a fresh look at current trends in patient care and continuing education teaching methods The ideas and insights provided here are based on the author's long career in clinical practice and teaching medical students and residents Medical education is no exception to the changes at every level in medicine For example the ready access to medical information via the Internet and other media has produced smarter and informed patients Multi specialty hospital practice has replaced the individual doctor patient relationship perhaps compromising patient care to some extent New subjects have been added over the years to medical curricula Nevertheless there has often been a reluctance to remove older topics possibly limiting the medical training course's ability to develop as expected The transition from theories of higher education to the reality of curriculum planning and design is a huge leap An important question is how to translate the mission of higher education in general which has been variably described as a training of reflective individuals who possess both culture and expertise and can master any subject with facility into a coherent teaching program The mission of medical education includes the promotion of professionalism in learners by including courses in medical ethics that have become integral to medical education in the USA However despite the development of standards and competencies related to professionalism there is no consensus on the specific goals of medical ethics education the knowledge and skills expected of learners and the best pedagogical methods and processes for their implementation and assessment A significant contribution to the clinical teaching literature Curriculum Design Evaluation and Teaching in Medical Education should be of interest to a variety of readers including clinical educators administrators health care professionals and especially residency directors
