Which percentage of the population that is 85 years of age and older has some stage of Alzheimer disease 10%	
(AD)?	a.
b.	20%
c.	35%
d.	50%

ANS: D

AD is the most common degenerative disease of the brain. Approximately 5.3 million Americans have AD (Alzheimer Association, 2010), and there is no known cause or cure. AD typically affects people over 65 years of age, but can also strike younger people. The 85-year-old and over age group is currently the fastest-growing age group in the United States. It is estimated that 50% of this age group have AD.

An 85-year-old man is admitted to the hospital with gastroenteritis and dehydration. He receives a dose of meclizine hydrochloride, an anticholinergic, for vomiting. He begins to hallucinate and talk to his wife, who has been dead for 10 years. Which explanation best describes this behavior?

| a. | Dementia related to advanced age                   |
| b. | Delirium related to dehydration                    |
| c. | Dementia related to early Alzheimer's disease (AD) |
| d. | Delirium related to side effect of anticholinergic |

ANS: D

Anticholinergic drugs can cause sudden confusion in older adults. There is nothing in the history that suggests that the behavior would be related to AD or any other dementia as dementias progress slowly. Dehydration would increase the effect of the anticholinergic.
