Mechanical Technology Exemplar 2014:

Natural Fiber Composites R.D.S.G. Campilho, 2015-11-05 This book brings value to anyone working with or designing natural fiber composite structures. It helps readers understand the value these materials can add to projects, how to choose the best materials and treatments, how to safely design and fabricate products made of natural fiber composites, and how to test them for safety. It covers the characterization of natural fibers, matrices, and respective composites, and how to enhance their performance and processing, as well as testing and degradation issues. *Lignocellulosic Composite Materials* Susheel Kalia, 2017-12-23 This book comprehensively summarizes important aspects of research in the active field of lignocellulosic polymer composites, including polymer materials from or containing cellulose, hemicellulose, and lignin. It describes how these materials can be produced from forest products and natural fibers from sources such as jute, flax, sisal, and many more, and even from agricultural residues like wheat straw, corn stover, or sugarcane bagasse. In times of high demand for renewable green materials, lignocellulosic materials from organic matter produced by trees, shrubs, and agricultural crops present a highly attractive feedstock. The international authors explain different treatment and fabrication methods for the production of lignocellulosic materials. Other chapters address the properties of these green materials or illustrate specific applications ranging from food packaging and household products to adsorbents and even conductive polymer composites. In this way, this book offers a broad and comprehensive overview over the entire field of lignocellulosic composite materials. *Bridging The Gap: Innovation Brokerage In China* Antonio Crupi, Dominique Lepore, Francesca Spigarelli, 2025-06-03 Bridging the Gap: Innovation Brokerage in China explores the crucial role of innovation intermediaries in China's rapidly evolving technological and industrial landscape. Through a collection of reviews and case studies, the book investigates how intermediaries, both public and private, facilitate collaboration, bridge knowledge gaps, and accelerate innovation across sectors. The book provides an analysis of a broad range of innovation intermediaries, shifting from the Chinese government and private sector leaders like Baidu to broader frameworks such as the engagement ecosystem. Special attention is given to various industries, including aircraft and construction sectors, where brokerage is necessary for aligning technological advancements with sustainability goals. Furthermore, the book delves into the challenges and opportunities presented by transnational innovation, with insights into academic cooperation between Italy and China and the role of innovation platforms in enhancing the innovative capacities of SMEs. By examining both domestic and international perspectives, the book offers a comprehensive analysis of how innovation intermediaries serve as drivers for technological development and economic growth in China. *Sustainable Biotechnology- Enzymatic Resources of Renewable Energy* Om V. Singh, Anuj K. Chandel, 2018-08-25 Nature offers abundant renewable resources that can be used to partially replace fossil fuels and commodity chemicals, but issues of cost, technology readiness levels, and compatibility with existing distribution networks remain huge challenges. Cellulosic ethanol and biodiesel are the most immediately obvious target fuels, with hydrogen, methane, and butanol as other potentially

viable products This book continues to bridge the technology gap and focus on critical aspects of lignocellulosic biomolecules and the respective mechanisms regulating their bioconversion to liquid fuels into energy and value added products of industrial significance This book is a collection of reviews elucidating several broad ranging areas of progress and challenges in the utilization of sustainable resources of renewable energy especially in biofuels This book comes just at a time when government and industries are accelerating their efforts in the exploration of alternative energy resources with expectations of the establishment of long term sustainable alternatives to petroleum based liquid fuels Apart from liquid fuel this book also emphasizes the use of sustainable resources for value added products which may help in revitalizing the biotechnology industry at a broader scale This book also provides a comprehensive review of basic literature and advance research methodologies to graduate students studying environmental microbiology chemical engineering bio economy and microbial biotechnology
