Developing Charging Infrastructure and Technologies for Electric Vehicles Alam, Mohammad Saad, Pillai, Reji Kumar, Murugesan, N., 2021-12-31

The increase in air pollution and vehicular emissions has led to the development of the renewable energy based generation and electrification of transportation. Further the electrification shift faces an enormous challenge due to limited driving range, long charging time and high initial cost of deployment. Firstly there has been a discussion on renewable energy such as how wind power and solar power can be generated by wind turbines and photovoltaics respectively while these are intermittent in nature. The combination of these renewable energy resources with available power generation system will make electric vehicle (EV) charging sustainable and viable after the payback period. Recently there has also been a significant discussion focused on various EV charging types and the level of power for charging to minimize the charging time. By focusing on both sustainable and renewable energy as well as charging infrastructures and technologies the future for EV can be explored.

Developing Charging Infrastructure and Technologies for Electric Vehicles reviews and discusses the state of the art in electric vehicle charging technologies, their applications, economic, environmental and social impact and integration with renewable energy. This book captures the state of the art in electric vehicle charging infrastructure deployment, their applications, architectures and relevant technologies. In addition this book identifies potential research directions and technologies that facilitate insights on EV charging in various charging places such as smart home charging, parking, EV charging and charging stations. This book will be essential for power system architects, mechanics, electrical engineers, practitioners, developers, practitioners, researchers, academicians and students interested in the problems and solutions to the state of the art status of electric vehicles.

Development and Implementation of an E-Vehicle Allocation Optimized System for Corporate Usage ,2019-03-20 Master's Thesis from the year 2018 in the subject Engineering Automotive Engineering Technical

University of Munich language English abstract This thesis is an initial approach to analyze the design and implementation of an e vehicle sharing system in the P3 Group office in Paris An overview of the electric vehicle charging infrastructure along with the relevant aspects of charging modes is provided A showcase of the analysis of different car sharing models within Europe is given after which a specific case study is analyzed in greater detail The parameters and features for the system were derived from a competitive benchmark of the car sharing models on the market today The objective was to assist the company in planning and managing a corporate e vehicle sharing system in a profitable way while offering the employees

good quality service Therefore the cost of designing and installing the P3 EV charging station was evaluated On this matter empirical data was gathered from P3 employees to better understand their daily commute their needs and their expectations of the system An optimization model for distances cost and charging patterns was discussed and formalized as an integer linear program in MATLAB Given the complexity inherent to this optimization model stochastic distribution was employed to minimize the cost for the company taking into consideration the trips paid and the costs involved namely the personal wage of an employee A focus on the optimal design of an e vehicle sharing system was necessary while considering the problem s dimensionality number of vehicles parking places battery capacities etc and employee relocation time This study determines if the system provides higher net benefits to the company than available transportation alternatives As a result of this pricing comparison a significant reduction in total cost could be achieved for the company The data set conclusively supports the implementation of the e vehicle sharing system which provides a decreased cost versus the use of public transportation A possible avenue of future research is to extend the functionality of the developed model by adding a responsive user demand and possibly maximizing the car sharing ridership between employees **Automotive Electronics Handbook** Ronald K.
