

(i) Find the limit superior and limit inferior of the sequence $\{(-1)^n\}$.

(ii) Define the Cantor set C and Prove that it has Lebesgue measure zero.

(iii) Let f be real valued function defined on a measurable domain D and F be a closed set in \mathbb{R} . Prove that f is Measurable if and only if $f^{-1}(F)$ is measurable.

(iv) Let f be a function with measurable domain D . Then f is measurable if and only if the function $g(x) = \begin{cases} f(x), & \text{if } x \in D \\ 0, & \text{if } x \notin D \end{cases}$ is measurable.

(v) Let $\{f_n\}$ be sequence of Measurable function defined on a measurable set E of finite measure and $f_n \rightarrow f$ in measure a.e. Then prove that $f_n \rightarrow f$ in measure.

Part-III Give detailed answers, each question carries equal marks. (30)

Q.3 Show that the Lebesgue outer measure of an interval is its length.

Q.4 Prove that every Lebesgue measurable set with positive measure has a non-Lebesgue measurable subset.

Q.5 Let $f : R \times R \rightarrow R$ be a Measurable function and $g : R \times R \rightarrow R$ be a Borel Measurable function. Show that $g \circ f$ is a Measurable function.

Q.6 State and Prove the Bounded Convergence theorem.

Q.7 Let g be integrable on E and $\{f_n\}$ be sequence of Measurable function such that $|f_n| \leq g$ on E . Suppose that $\lim_n f_n(x) = f(x)$ a.e on E . Then show that $\lim_n \int_E f_n = \int_E \lim_n f_n$.
Give a counter example that this result fails to hold if $\{f_n\}$ is unbounded?

Questions and Answers in General Topology, 1997 *Quantifiers, Questions and Quantum Physics* Daniel Kolak, John Symons, 2007-11-10 Jaakko Hintikka is one of the most creative figures in contemporary philosophy He has made significant contributions to virtually all areas of the discipline from epistemology and the philosophy of logic to the history of philosophy and the philosophy of science Part of the fruitfulness of Hintikka's work is due to its opening important new lines of investigation and new approaches to traditional philosophical problems This volume gathers together essays from some of Hintikka's colleagues and former students exploring his influence on their work and pursuing some of the insights that we have found in his work This book includes a comprehensive overview of Hintikka's philosophy by Dan Kolak and John Symons and an annotated bibliography of Hintikka's work **Measure, Topology, and Fractal Geometry** Gerald

Edgar, 2007-10-23 From reviews of the first edition In the world of mathematics the 1980's might well be described as the decade of the fractal Starting with Benoit Mandelbrot's remarkable text The Fractal Geometry of Nature there has been a deluge of books articles and television programmes about the beautiful mathematical objects drawn by computers using recursive or iterative algorithms which Mandelbrot christened fractals Gerald Edgar's book is a significant addition to this deluge Based on a course given to talented high school students at Ohio University in 1988 it is in fact an advanced undergraduate textbook about the mathematics of fractal geometry treating such topics as metric spaces measure theory dimension theory and even some algebraic topology the book also contains many good illustrations of fractals including 16 color plates Mathematics Teaching The book can be recommended to students who seriously want to know about the mathematical foundation of fractals and to lecturers who want to illustrate a standard course in metric topology by interesting examples Christoph Bandt Mathematical Reviews not only intended to fit mathematics students who wish to learn fractal geometry from its beginning but also students in computer science who are interested in the subject Especially for the last students the author gives the required topics from metric topology and measure theory on an elementary level The book is written in a very clear style and contains a lot of exercises which should be worked out H Haase Zentralblatt About the second edition Changes throughout the text taking into account developments in the subject matter since 1990 Major

changes in chapter 6 Since 1990 it has become clear that there are two notions of dimension that play complementary roles so the emphasis on Hausdorff dimension will be replaced by the two Hausdorff dimension and packing dimension 6 1 will remain but a new section on packing dimension will follow it then the old sections 6 2 6 4 will be re written to show both types of dimension Substantial change in chapter 7 new examples along with recent developments Sections rewritten to be made clearer and more focused

The forbid/allow asymmetry

Bregje Holleman,2021-09-13 Questionnaires are widely used in the social sciences and very often survey data form the basis for governmental and commercial planning or evaluation Yet the quality of survey data is not attested to since a large variety of factors in the language use situation prove to influence the answers unintentionally The forbid/allow asymmetry is a well known example of this when respondents are asked whether something should be forbidden about 50% may answer yes forbid whereas an equivalent question phrased with the verb to allow could well cause up to 75% of the respondents to answer no it should not be allowed Which question wording is preferable to measure respondents true attitudes Only when we know why the answers differ can we decide on that This book is the first to apply a systematic cognitive approach to describe the causes of the forbid/allow asymmetry The question answering process is unravelled by a variety of experiments and meta analytic techniques Analyses reveal that the difference in question wording does not prompt respondents to retrieve different attitudes Instead the asymmetry reflects that the question wording causes the response options to be used differently Because of the qualifying dimensions in the question text the meanings of yes and no change as well as the cognitive distance between them This study sheds a different light on processes of question answering and text

interpretation Furthermore practical advice on questionnaire design and on the interpretation of survey data is given on the basis of these new insights
