Mental Arithmetic Key Stage 2 Liz Hopkins, 1998 This photocopiable resource for Key Stage 2 is divided into two main parts The first covers the important areas of mental maths such as the four rules fractions decimals money and time and the second part presents associated topics to enable pupils to employ mental skills in contexts such as shape and measures The work is at two levels of difficulty National Curriculum Level 3 and Levels 4 5 Start Up Maths Damon James, 2007 Books in Start Up Maths Series 5 Pages 160 pp Specification Softcover perfect bound 275 mm x 201 mm Category Workbook Publication date March 2007 The Excel series of Start Up Maths for Years 3 7 have been specifically designed to be used as classroom or homework books in order to assist students teachers and parents with their understanding of mathematics Each book in the series covers the year's work in detail Innovative features provide an integrated and supportive approach to learning All units of work review tests and Start Up sections are interrelated and cross referenced to each other This series of books is a must for students who want to cover the year's work comprehensively with no gaps in their knowledge The completion of this workbook in Year 6 will ensure that a student will be fully prepared for the work in Year 7 In this book your child will find 176 units of work to complete 34 review tests for revision over 2000 exercises to practise a Start Up section for extra help with understanding questions comprehensive coverage of the year's work *Number Systems* Anthony Kay, 2025-09-04 Number Systems A Path into Rigorous Mathematics aims to introduce number systems to an undergraduate audience in a way that emphasises the importance of rigour and with a focus on providing detailed but accessible explanations of theorems and their proofs The book continually seeks to build upon students' intuitive ideas of how numbers and arithmetic work and to guide them towards the means to embed this natural understanding into a more structured framework of understanding The author's motivation for writing this book is that most previous texts which have complete coverage of the subject have not provided the level of explanation needed for first year students On the other hand those that do give good explanations tend to focus broadly on Foundations or Analysis and provide incomplete coverage of Number Systems Features Approachable for first year undergraduates but still of interest to more advanced students and postgraduates Does not merely present definitions theorems and proofs but also motivates them in terms of intuitive knowledge and discusses methods of proof Draws attention to connections with other areas of mathematics Plenty of exercises for students both straightforward problems and more in depth investigations Introduces many concepts that are required in more advanced topics in mathematics New to the second edition Complete solutions to all exercises and hints for the in depth investigations Extensive changes to chapters 4 and 5 including defining integral domains as distinct from commutative rings a more complete discussion of irreducibles primes and unique factorisation and more topics in elementary number theory A completely revised chapter 8 giving a more coherent account of quadratic rings and their unique or non unique factorisation properties A thorough correction of typos and errors across all chapters Updates to the bibliography
