Recent Advancement in White Biotechnology Through Fungi Ajar Nath Yadav, Sangram Singh, Shashank Mishra, Arti Gupta, 2019-04-24 White biotechnology is industrial biotechnology dealing with various biotech products through applications of microbes. The main application of white biotechnology is commercial production of various useful organic substances such as acetic acid, citric acid, acetone, glycerine etc and antibiotics like penicillin, streptomycin, mitomycin etc and value added product through the use of microorganisms especially fungi and bacteria. The value added products included bioactive compounds, secondary metabolites, pigments and industrially important enzymes for potential applications in agriculture, pharmaceuticals, medicine and allied sectors for human welfare. In the 21st century techniques were developed to harness fungi to protect human health through antibiotics, antimicrobial, immunosuppressive agents, value added products etc which led to industrial scale production of enzymes, alkaloids, detergents, acids, biosurfactants. The first large scale industrial applications of modern biotechnology have been made in the areas of food and animal feed production, agricultural green biotechnology and pharmaceuticals, medical red biotechnology. In contrast the production of bio active compounds through fermentation or enzymatic conversion is known industrial or white biotechnology. The beneficial fungal strains may play important role in agriculture industry and the medical sectors. The beneficial fungi play a significance role in plant growth promotion and soil fertility using both direct solubilization of phosphorus, potassium and zinc, production of indole, acetic acid, gibberellic acid, cytokinin and siderophores and indirect production of hydrolytic enzymes, siderophores, ammonia, hydrogen cyanides and antibiotics. Mechanisms of plant growth promotion for sustainable agriculture. The fungal strains and their products, enzymes, bio active compounds and secondary metabolites are very useful for industry. The discovery of antibiotics is a milestone in the development of white biotechnology. Since then white biotechnology has steadily developed and now plays a key role in several industrial sectors providing both high valued nutraceuticals and pharmaceutical products. The fungal strains and bio active compounds also play important role in the environmental cleaning. This volume covers the latest research developments related to value added products in white biotechnology through fungi
