Handbook of Research on Innovations in Systems and Software Engineering Díaz, Vicente García,Lovelle, Juan Manuel Cueva,García-Bustelo, B. Cristina Pelayo,2014-08-31 Professionals in the interdisciplinary field of computer science focus on the design operation and maintenance of computational systems and software Methodologies and tools of engineering are utilized alongside the technological advancements of computer applications to develop efficient and precise databases of

information The Handbook of Research on Innovations in Systems and Software Engineering combines relevant research from all facets of computer programming to provide a comprehensive look at the challenges and changes in the field. With information spanning topics such as design models, cloud computing and security, this handbook is an essential reference source for academicians, researchers, practitioners and students interested in the development and design of improved and effective technologies.

Emergency Management Burak Eksioglu, 2012-01-27 After the large scale disasters that we have witnessed in the recent past it has become apparent that complex and coordinated emergency management systems are required for efficient and effective relief efforts. Such management systems can only be developed by involving many scientists and practitioners from multiple fields. Thus this book on emergency management discusses various issues such as the impact of human behavior, development of hardware and software architectures, cyber security concerns, dynamic process of guiding evacuees and routing vehicles, supply allocation and vehicle routing problems in preparing for and responding to large scale emergencies. The book is designed to be useful to students, researchers and engineers in all academic areas but particularly for those in the fields of computer science, operations research and human factor. We also hope that this book will become a useful reference for practitioners.

Self-Organization in Sensor and Actor Networks Falko Dressler, 2008-03-11 Self Organization in Sensor and Actor Networks explores self organization mechanisms and methodologies concerning the efficient coordination between intercommunicating autonomous systems. Self organization is often referred to as the multitude of algorithms and methods that organise the global behaviour of a system based on inter-system communication. Studies of self organization in natural systems first took off in the 1960s. In technology such approaches have become a hot research topic over the last 4-5 years with emphasis upon management and control in communication networks and especially in resource constrained sensor and actor networks. In the area of ad hoc networks new solutions have been discovered that imitate the properties of self organization. Some algorithms for on demand communication and coordination including data centric networking are well known examples. Key features include: Detailed treatment of self organization in mobile sensor and actor networks, coordination between autonomous systems and bio inspired networking, Overview of the basic methodologies for self organization, a comparison to central and hierarchical control and classification of algorithms and techniques in sensor and actor networks, Explanation of medium access control, ad hoc routing, data centric networking, synchronization and task allocation issues, Introduction to swarm intelligence, artificial immune system, molecular information exchange. Numerous examples and application scenarios to illustrate the theory. Self Organization in Sensor and Actor Networks will prove essential reading for students of computer science and related fields, researchers working in the area of massively distributed systems, sensor networks, self organization and bio inspired networking will also find this reference useful.
