*Structured Decision Making* David R. Smith, 2020-05-12 Provides and analyzes real examples of how structured decision making SDM can help solve complex problems involving natural resources. When faced with complicated potentially controversial decisions that affect our environment many resource management agencies have come to realize the value of structured decision making SDM the systematic use of principles and tools of decision analysis. Few professionals however have extensive experience implementing SDM. Structured Decision Making provides key information to both current adopters of the method and those who are deploying it for the first time by demonstrating the formal use of decision analysis to support difficult real world natural resource management decisions. Drawing on case studies from multiple public agencies in the United States Canada Australia and Mauritius the editors present an overview of decision analysis a classification of decision types and a catalog of decision analysis methods. Dozens of detailed charts and maps help contextualize the material. These case studies examine a rich variety of topics including keeping forest birds free from disease conserving imperiled freshwater mussels managing water for oil sands mining dealing with coastal wetlands in the face of sea level rise designing networks for prairie dependent taxa combatting invasive alpine shrubs managing vernal pool habitats for obligate amphibian species and much more. Aimed at decision makers tackling natural resource challenges in government agencies around the world as well as advanced undergraduate and graduate students preparing to work in natural resource management. Structured Decision Making shows how SDM can be implemented to achieve optimal outcomes that integrate social values and scientific understanding.
