**Encyclopedia of Science and Technology Communication** Susanna Hornig Priest, 2010-07-14 The explosion of scientific information is exacerbating the information gap between richer poorer educated less educated publics The proliferation of media technology and the popularity of the Internet help some keep up with these developments but also make it more likely others fall further behind This is taking place in a globalizing economy and society that further complicates the division between information haves and have nots and compounds the challenge of communicating about emerging science and technology to increasingly diverse audiences Journalism about science and technology must fill this gap yet journalists and journalism students themselves struggle to keep abreast of contemporary scientific developments Scientist aided by public relations and public information professionals must get their stories out not only to other scientists but also to broader public audiences Funding agencies increasingly expect their grantees to engage in outreach and education and such activity can be seen as both a survival strategy and an ethical imperative for taxpayer supported university based research Science communication often in new forms must expand to meet all these needs Providing a comprehensive introduction to students professionals and scholars in this area is a unique challenge because practitioners in these fields must grasp both the principles of science and the principles of science communication while understanding the social contexts of each For this reason science journalism and science communication are often addressed only in advanced undergraduate or graduate specialty courses rather than covered exhaustively in lower division courses Even so those entering the field rarely will have a comprehensive background in both science and communication studies This circumstance underscores the importance of compiling useful reference materials The Encyclopedia of Science and Technology Communication presents resources and strategies for science communicators including theoretical material and background on recent controversies and key institutional actors and sources Science communicators need to understand more than how to interpret scientific facts and conclusions they need to understand basic elements of the politics sociology and philosophy of science as well as relevant media and communication theory principles of risk communication new trends and how to evaluate the effectiveness of science communication programmes to mention just a few of the major challenges This work will help to develop and enhance such understanding as it addresses these challenges and more Topics covered include advocacy policy and research organizations environmental and health communication philosophy of science media theory and science communication informal science education science journalism as a profession risk communication theory public understanding of science pseudo science in the news special problems in reporting science and technology science communication ethics

**The Routledge Companion to Public Humanities Scholarship** Daniel Fisher-Livne, Michelle May-Curry, 2024-05-31 Across humanities

disciplines public scholarship brings academics and community members and organizations together in mutually beneficial partnership for research teaching and programming While the field of publicly engaged humanities scholarship has been growing for some time there are few volumes that have attempted to define and represent its scope The Routledge Companion to Public Humanities Scholarship brings together wide ranging case studies sharing perspectives on this work grounded in its practice in the United States The collection begins with chapters reflecting on theories and practices of public humanities scholarship The case studies that follow are organized around six areas of particular impact in public humanities scholarship Informing contemporary debates amplifying community voices and histories helping individuals and communities navigate difficult experiences preserving culture in times of crisis and change expanding educational access and building and supporting public scholarship The Companion concludes with a glossary introducing select concepts Taken together these resources offer an overview for students and practitioners of public humanities scholarship creating an accessible vocabulary rooted in the practices that have so advanced academic and community life Although drawing on case studies from the US these examples offer perspectives and insights relevant to public humanities around the world This book will be of interest to anyone working within the public humanities or wanting to make their work public and engage with wider communities
