volume is a simple record of the pioneer work done in such departments up to date by Mr Nikola Tesla in whom the world has already recognized one of the foremost of modern electrical investigators and inventors No attempt whatever has been made here to emphasize the importance of his researches and discoveries Great ideas and real inventions win their own way determining their own place by intrinsic merit But with the conviction that Mr Tesla is blazing a path that electrical development must follow for many years to come the compiler has endeavored to bring together all that bears the impress of Mr Tesla's genius and is worthy of preservation Aside from its value as showing the scope of his inventions this volume may be of service as indicating the range of his thought There is intellectual profit in studying the push and play of a vigorous and original mind

**Tesla's Autobiography** Nikola Tesla, 2012-02-18

The progressive development of man is vitally dependent on invention. It is the most important product of his creative brain. Its ultimate purpose is the complete mastery of mind over the material world, the harnessing of the forces of nature to human needs. This is the difficult task of the inventor who is often misunderstood and unrewarded. But he finds ample compensation in the pleasing exercises of his powers and in the knowledge of being one of that exceptionally privileged class without whom the race would have long ago perished in the bitter struggle against pitiless elements.
