Courts,2012 Zombie Theory Sarah Juliet Lauro,2017-10-15 Zombies first shuffled across movie screens in 1932 in the low budget Hollywood film White Zombie and were reimagined as undead flesh eaters in George A Romero's The Night of the Living Dead almost four decades later. Today zombies are omnipresent in global popular culture from video games and top rated cable shows in the United States to comic books and other visual art forms to low budget films from Cuba and the Philippines. The zombie's ability to embody a variety of cultural anxieties ecological disaster social and economic collapse political extremism has ensured its continued relevance and legibility and has precipitated an unprecedented deluge of international scholarship. Zombie studies manifested across academic disciplines in the humanities but also beyond spreading into sociology economics computer science mathematics and even epidemiology. Zombie Theory collects the best interdisciplinary zombie scholarship from around the world. Essays portray the zombie not as a singular cultural figure or myth but show how the undead represent larger issues the belief in an afterlife fears of contagion and technology the effect of capitalism and commodification racial exclusion and oppression dehumanization. As presented here zombies are not simple metaphors rather they emerge as a critical mode for theoretical work. With its diverse disciplinary and methodological approaches Zombie Theory thinks through what the walking undead reveal about our relationships to the world and to each other. COVID-19: Food System Frailties and Opportunities Claire Kremen, Elliot Berry, Rachel Bezner Kerr, Patrick Meyfroidt, Ivette Perfecto, Todd Rosenstock, José Antonio Teixeira, Hannah Wittman, 2023-11-21 The global coronavirus pandemic is revealing major weaknesses inequities and system wide risks in global food systems giving renewed urgency to foster pathways to greater food system sustainability and resilience. Due to rising unemployment supply chain disruptions and other responses to the pandemic such as disruptions to social assistance programs in some countries predictions suggest a near doubling of food insecurity globally. Nutritional changes are also occurring as food availability and access changes.

leading to substitution of dry canned or processed foods for healthier fresh ingredients for some communities and the reverse for others. These food security and nutritional changes are likely to be as impactful on human health as the virus itself. As a system wide shock the pandemic reveals weaknesses of global supply chains. The media highlighted empty supermarket shelves alongside food dumping in situations where producers locked into disappearing food service outlets were unable to access new markets. Farmers with long standing reliance on migrant agricultural labor that can no longer travel across international borders under lockdown struggle to access support for the upcoming harvest season. The pandemic highlights well known inequities for marginalized food systems employees as essential workers are exposed to greater risks of contracting the virus in food processing agricultural and grocery store settings but have little choice in accepting these conditions in order to keep these low paying jobs. The pandemic reinforces another well known food system inequity. Marginalized and impoverished minorities often suffer from diet related diseases i.e. cardiovascular diseases, diabetes and/or malnutrition that place them at greater risk of morbidity and mortality from the coronavirus. Lockdowns and border closures are reducing economic opportunities such as day labor and agricultural markets in some regions such as much of Africa. Ensuing risks of food and nutrition insecurity for vast segments of the population threaten to set back development, increase social conflict and catalyze migration. Finally the current pandemic shines a spotlight on the systemic risk of infectious diseases to emerge and become globalized through local bushmeat markets and international wildlife trade and how wildlife hunting and trade is influenced by land use changes including by industrial agriculture. At the same time adaptive responses to the coronavirus illustrate how more resilient and sustainable food systems could evolve going forward. To avoid supply chain disruptions communities are increasing their reliance on local food systems including an increase in urban gardening and community supported agriculture programs. Small scale farmers are innovating to connect with buyers and with each other including through new online marketing initiatives. Entrepreneurs are identifying foods that would otherwise be wasted and directing them to food banks. Retailers and wholesalers are reconfiguring their distribution networks to shift food to where it is needed most. Food pantries, local producers and food businesses are also collaborating with municipal governments to address food security gaps arising from COVID 19 impacts.
