Multiple View Geometry In Computer Vision:

Multiple View Geometry in Computer Vision Richard Hartley, Andrew Zisserman, 2003 A basic problem in computer vision is to understand the structure of a real world scene given several images of it. Techniques for solving this problem are taken from projective geometry and photogrammetry. Here the authors cover the geometric principles and their algebraic representation in terms of camera projection matrices, the fundamental matrix and the trifocal tensor. The theory and methods of computation of these entities are discussed with real examples as is their use in the reconstruction of scenes from multiple images. The new edition features an extended introduction covering the key ideas in the book which itself has been updated with additional examples and appendices and significant new results which have appeared since the first edition. Comprehensive background material is provided so readers familiar with linear algebra and basic numerical methods can understand the projective geometry and estimation algorithms presented and implement the algorithms directly from the book.

Outdoor and Large-Scale Real-World Scene Analysis Frank Dellaert, Jan-Michael Frahm, Marc Pollefeys, Laura Leal-Taixé, Bodo Rosenhahn, 2012-09-22 This book constitutes the thoroughly refereed post proceedings of the 15th International Workshop on Theoretic Foundations of Computer Vision held as a Dagstuhl Seminar in Dagstuhl Castle, Germany in June/July 2011. The 19 revised full papers presented were carefully reviewed and selected after a blind peer review process. The topic of this Workshop was Outdoor and Large Scale Real World Scene Analysis which covers all aspects, applications and open problems regarding the performance or design of computer vision algorithms capable of working in outdoor setups and/or large scale environments. Developing these methods is important for driver assistance, city modeling and reconstruction, virtual tourism, telepresence and motion capture.
