Cybernetics and the Constructed Environment Zihao Zhang, 2024-07-25

Grounded in contemporary landscape architecture theory and practice, Cybernetics and the Constructed Environment blends examples from art, design, and engineering with concepts from cybernetics and posthumanism, offering a transdisciplinary examination of the ramifications of cybernetics on the constructed environment. Cybernetics, or the study of communication and control in animals and machines, has grown increasingly relevant nearly 80 years after its inception. Cyber physical systems, sensing networks, and spatial computing algorithms, and intelligent machines, create endless feedback loops with human and non-human actors, co-producing a cybernetic environment. Yet, when an ecosystem is meticulously managed by intelligent machines, can we still call it wild nature? Posthumanism ideas, such as new materialism, actor network theory, and object-oriented ontology, have become increasingly popular among design disciplines, including landscape architecture, and may have provided transformative frameworks to understand this entangled reality. However, design still entails a sense of intentionality and an urge to control. How do we then address the tension between the designer's intentionality and the co-produced reality of more than human agents in the cybernetic environment? Is posthumanism enough to develop a framework to think beyond our all-too-human ways of thinking? For researchers, scholars, practitioners, and students in environmental design and engineering disciplines, this book maps out a paradigm of environmentalism and ecological design rooted in non-communication and uncontrollability, and puts a speculative turn on cybernetics. Chapters 8 and 9 of this book are freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons Attribution Non-Commercial No Derivatives CC BY NC ND 4.0 license.
