Education in Obstetrics and Gynecology Fedde Scheele, Florian Recker, 2024-11-20 High quality education and training of medical professionals is crucial to a healthy society and to ensure the wellbeing of global populations. Importantly, healthcare professionals need to be up to date with the latest developments and techniques in the field while students embarking on their medical education require not just a robust and forward-facing curriculum but also the self-reflective and interpersonal skills so crucial to a resilient workforce. This Research Topic welcomes manuscripts that cover the education of healthcare professionals in the Obstetrics and Gynecology field, from undergraduate and postgraduate studies to continuing medical education post-university.

The Human-Centered Classroom KHRITISH SWARGIARY, 2025-11-14 Education is standing at the edge of the greatest transformation in human history. For centuries, schools were designed like factories; students entered

as raw material were processed through standardized curricula and were expected to emerge as identical products ready for the workforce. That model once served a world driven by industrial labor limited information and predictable career paths. But today we live in an age of artificial intelligence global connectivity cultural diversity emotional crises and unprecedented technological acceleration. The old system is no longer just outdated it is dangerously inadequate. This book was born from a simple but urgent question: What should education look like in a world where machines can think information is infinite and human beings are searching for meaning. As an educator researcher and lifelong learner I have spent years working at the intersection of inclusive education educational technology and policy driven reform. Through my engagement with students teachers parents researchers and institutions one reality has become painfully clear while technology is advancing rapidly our education systems are failing to keep pace with the human needs of learners. Children are more connected than ever before yet emotionally more isolated. Knowledge is everywhere yet understanding is rare. Tools are powerful yet compassion and creativity are often neglected. This book does not argue that technology is the problem. On the contrary it recognizes artificial intelligence digital learning platforms and data driven education as some of the most powerful allies humanity has ever created. What we must question however is how these tools are used and whether they are designed to serve human growth or simply economic efficiency. When technology is introduced without empathy it deepens inequality. When used without ethics it weakens trust. But when aligned with human values it becomes a force for extraordinary transformation. At the heart of this book lies a conviction: The future of education must be human centered emotionally intelligent and radically inclusive. Every child whether gifted or struggling disabled or neurodivergent wealthy or underprivileged deserves an education that recognizes their dignity potential and individuality. For far too long education systems across the world have defined success by narrow standards of academic performance while ignoring emotional wellbeing creativity adaptability and purpose. The result is a generation of students who may be skilled yet uncertain knowledgeable yet disconnected from themselves and the world. This book calls for a new educational philosophy one that integrates artificial intelligence with emotional intelligence digital tools with ethical responsibility and innovation with inclusion. It presents a vision of classrooms where technology does not replace teachers but empowers them where data supports learning but does not erase human judgment and where every learner regardless of ability or background is seen heard and supported. I have written this book not merely as an academic contribution but as a deeply personal and professional commitment to the future of education. It is meant for teachers seeking meaning beyond exams policymakers looking for sustainable reform researchers pursuing impact and students who deserve a learning experience that prepares them not only for jobs but for life. The world our children will inherit will be complex uncertain and technologically advanced. But it must also be compassionate fair and deeply human. Education is the bridge between those two realities. If we build that bridge wisely we can ensure that artificial intelligence enhances human potential rather than diminishing it and that progress never comes at the cost of dignity. This book invites
