Emmy Noether - Mathematician Extraordinaire David E. Rowe, 2021-01-09 Although she was famous as the mother of modern algebra Emmy Noether's life and work have never been the subject of an authoritative scientific biography Emmy Noether Mathematician Extraordinaire represents the most comprehensive study of this singularly important mathematician to date Focusing on key turning points it aims to provide an overall interpretation of Noether's intellectual development while offering a new assessment of her role in transforming the mathematics of the twentieth century Hermann Weyl her colleague before both fled to the United States in 1933 fully recognized that Noether's dynamic school was the very heart and soul of the famous Göttingen community Beyond her immediate circle of students Emmy Noether's lectures and seminars drew talented mathematicians from all over the world Four of the most important were B. L. van der Waerden Pavel Alexandrov Helmut Hasse and Olga Taussky Noether's classic papers on ideal theory inspired van der Waerden to recast his research in algebraic geometry Her lectures on group theory motivated Alexandrov to develop links between point set topology and combinatorial methods Noether's vision for a new approach to algebraic number theory gave Hasse the impetus

to pursue a line of research that led to the Brauer Hasse Noether Theorem whereas her abstract style clashed with Taussky's approach to classical class field theory during a difficult time when both were trying to find their footing in a foreign country. Although similar to *Proving It Her Way*, Emmy Noether's *A Life in Mathematics* is a lengthier study that addresses mathematically minded readers. Thus it presents a detailed analysis of Emmy Noether's work with Hilbert and Klein on mathematical problems connected with Einstein's theory of relativity. These efforts culminated with her famous paper *Invariant Variational Problems* published one year before she joined the Göttingen faculty in 1919.

The Craft of Scientific Presentations, Michael Alley, 2013-06-21. *The Craft of Scientific Presentations*, 2nd edition, aims to strengthen you as a presenter of science and engineering. The book does so by identifying what makes excellent

presenters such as Brian Cox Jane Goodall Richard Feynman and Jill Bolte Taylor so strong In addition the book explains what causes so many scientific presentations to flounder One of the most valuable contributions of this text is that it teaches the assertion evidence approach to scientific presentations Instead of building presentations as most engineers and scientists do on the weak foundation of topic phrases and bulleted lists this assertion evidence approach calls for building presentations on succinct message assertions supported by visual evidence Unlike the commonly followed topic subtopic approach that PowerPoint leads presenters to use the assertion evidence approach is solidly grounded in research By showing the differences between strong and weak presentations by identifying the errors that scientific presenters typically make and by teaching a much more powerful approach for scientific presentations than what is commonly practiced this book places you in a position to elevate your presentations to a high level In essence this book aims to have you not just succeed in your scientific presentations but excel About the Author Michael Alley has taught workshops on presentations to engineers and scientists on five continents and has recently been invited to speak at the European Space Organization Harvard Medical School MIT Sandia National Labs Shanghai Jiao Tong University Simula Research Laboratory and United Technologies An Associate Professor of engineering communication at Pennsylvania State University Alley is a leading researcher on the effectiveness of different designs for presentation slides *Queen's Papers in Pure and Applied Mathematics* ,2002 Los Angeles Magazine ,2005-02 Los Angeles magazine is a regional magazine of national stature Our combination of award winning feature writing investigative reporting service journalism and design covers the people lifestyle culture entertainment fashion art and architecture and news that define Southern California Started in the spring of 1961 Los Angeles magazine has been addressing the needs and interests of our region for 48 years The magazine continues to be the definitive resource for an affluent population that is intensely interested in a lifestyle that is uniquely Southern Californian *Sightlines* ,1989 Resources in Education ,1984 **Early Years** ,1981 **Class Field Theory** Katsuya Miyake,2001 This volume is a collection of articles contributed by the speakers at the Mathematical Society of Japan s Seventh International Research Institute entitled Class Field Theory Its Centenary and Prospect held in Tokyo in June 1998 Some of the articles are expository they discuss important interesting aspects of class field theory and contain full references Other articles are historical they vividly explain how leading number theorists in Europe and Japan developed and exchanged their mathematical ideas **THE Journal** ,1995-08 **Revue Roumaine de Mathématiques Pures Et Appliquées** ,1985
