## Mini Vidas:

*Human Retrovirus Protocols* Tuofu Zhu, 2008-02-04 A cutting edge collection of basic and state of the art methods optimized for investigating the molecular biology of this class of retrovirus. These readily reproducible techniques range from methods for the isolation and detection of human retroviruses to cutting edge methods for exploring the interplay between the viruses and the host. Here the researcher will find up to date techniques for the isolation and propagation of HIV, HTLV and foamy virus from a variety of sources. There are also assays for determining the cell tropism of HIV 1, the coreceptor usage of HIV 1 and human gene expression with HIV 1 infection by microarrays as well as for phenotyping HIV 1 infected monocytes and examining their fitness. Highlights include the detection and quantification of HIV 1 in resting CD4, a new cloning system for making recombinant virus cDNA microarrays and the determination of genetic polymorphisms in two recently identified HIV 1 co-factors that are critical for HIV 1 infection.

Rapid Food Analysis and Hygiene Monitoring Pierre-Jean Raugel, 1999 The main concerns of food consumers are food safety, quality and authenticity. Food control procedures have to be carried out in a rapid, reliable and cost effective manner. This handbook describes numerous kits, instruments and systems used for quality and hygiene control of food and food processing environment. These were produced by 42 European and non-European companies and commercialized by 248 European subsidiaries and distributors. The book emphasizes the validation procedures of AOAC, AFNOR and other official organizations. It is an important help for food analysts and hygiene controllers in facilitating the purchase and use of the respective kits and instruments.
