

## Combustion – Reaction Pictures

Combustion reaction pictures are diagrams that illustrate the stages of combustion. These diagrams show the propagation front moving through a fuel-rich mixture, with the propagation front being the region where the reaction is most active.

Initiation: The initiation stage is the initial ignition of the fuel. This stage is characterized by a small flame. Propagation: Propagation is the stage where the reaction front moves through the fuel-rich mixture. This stage is characterized by a large flame. Termination: The termination stage is the stage where the reaction front meets the propagation front, and the reaction ceases. This stage is characterized by a small flame.

Combustion reaction pictures are useful for understanding the behavior of combustion. They can be used to predict the behavior of a combustion reaction, such as the propagation front's speed and the termination front's position. They can also be used to study the effects of different factors on combustion, such as temperature, pressure, and the presence of catalysts.

Reaction pictures are also useful for understanding the behavior of a combustion reaction. They can be used to predict the behavior of a combustion reaction, such as the propagation front's speed and the termination front's position.
