Lennox, 2024-11-26 Will technology change what it means to be human? You don't have to be a computer scientist to have discerning conversations about artificial intelligence and technology. We all wonder where we're headed. Even now technological innovations and machine learning have a daily impact on our lives and many of us see good reasons to dread the future. Are we doomed to the surveillance society imagined in George Orwell's 1984? Mathematician and philosopher John Lennox believes that there are credible responses to the daunting questions that AI poses and he shows that Christianity has some very serious sensible evidence based things to say about the nature of our quest for superintelligence. This newly updated and expanded edition of 2084 will introduce you to a kaleidoscope of ideas. Key recent developments in technological enhancement, bioengineering and in particular artificial intelligence. Consideration of the nature of AI systems with insights from neuroscience. The way AI is changing how we communicate implications for medicine, manufacturing and the military, its use in advertising and automobiles and education and the future of work. How data is used today for surveillance, thought control. The rise of virtual reality and the metaverse. The transhumanist agenda and longtermism. The agreements and disagreements that scientists and experts have about the future of AI. The urgent need for regulation and control in light of the development of large language transformers like CHATGPT. Key insights from Scripture about the nature of human beings, the soul, our moral sense, our future and what separates us from machines. In straight forward accessible language you will get a better understanding of the current capacity of AI, its potential benefits and dangers, the facts and the fiction as well as possible future implications. Since the questions posed by AI are daunting as they might be, they affect most of us. They demand answers. 2084 and the AI Revolution, Updated and Expanded Edition has been written to challenge and ignite the curiosity of all readers. Whatever your worldview, Lennox provides clear information and credible answers that will bring you real hope for the future of humanity. [ECAI 2023](#) Kobi Gal, Ann Nowé, Grzegorz J. Redundancy at information and data level Niklas Haug, 2024-08-02 Research Paper undergraduate from the year 2024 in the subject Computer Science General grade 1.0 language English abstract Almost any system used in daily life relies on transmitting data Whether it's sending a message to a friend transferring money to a bank account or streaming a movie on Netflix data is being transmitted from one point to another However data transmission is not always error free Errors from both humans and machines are quite common and can occur due to various reasons including Transposed digits e.g. when typing an IBAN or an amount of money into a banking app Noise in the communication channel Interference in wireless communications Hardware malfunctions or software bugs Although we cannot eliminate the occurrence of errors true to the motto Shit happens we can implement measures to detect these errors and ideally correct them without having to retransmit the corrupted data a process known as Forward Error Correction FEC These measures range from simple methods such as checksums implemented in numbers used every day e.g. IBAN ISBN EAN to complex algorithms like Reed Solomon codes used in communication systems and storage devices For instance the ability to correct errors allows data on a CD which may be partly corrupted due to physical scratches to be reconstructed and ensures that QR codes remain scannable and decodable even when partially soiled or illegible
