Graham, Martin Grötschel, László Lovász, 1995-12-11 Handbook of Combinatorics Volume 1 focuses on basic methods paradigms results issues and trends across the broad spectrum of combinatorics. The selection first elaborates on the basic graph theory connectivity and network flows and matchings and extensions. Discussions focus on stable sets and claw free graphs nonbipartite matching multicommodity flows and disjoint paths minimum cost circulations and flows special proof techniques for paths and circuits and Hamilton paths and circuits in digraphs. The manuscript then examines coloring stable sets and perfect graphs and embeddings and minors. The book takes a look at random graphs hypergraphs partially ordered sets and matroids. Topics include geometric lattices structural properties linear extensions and correlation dimension and posets of bounded degree hypergraphs and set systems stability transversals and matchings and phase transition. The manuscript also reviews the combinatorial number theory point lattices convex polytopes and related complexes and extremal problems in combinatorial geometry. This time it concerns articles published in 2023 a landmark year for this journal as it was officially awarded its first impact factor. These papers are among the large number that attained significant interest last year but we selected just 10 which we consider to be the best. These articles have already made an impact in the form of original research or comprehensive reviews. As the Field Chief Editor I would like to stand alongside our journal staff to honor all authors who contributed very high level papers to the journal last year and are contributing to our success. We also thank the editors and reviewers of these papers and of all papers this past year for their invaluable contribution
