

The background of the cover is a dark, monochromatic photograph of tree fruits and leaves. Several round fruits, possibly apples or pears, are visible, some in sharp focus and others blurred. The leaves are scattered around the fruits, creating a natural, textured background.

Pest Management Programs For Deciduous Tree Fruits And Nuts:

Pest Management Programs for Deciduous Tree Fruits and Nuts Raymond D. Eikenbary, David J. Boethel, 1979 Pest Management Programs for Deciduous Tree Fruits and Nuts D. J. Boethel, 2013-11-11

Pest Management Programs for Deciduous Tree Fruits and Nuts attempts to present the current status of pest management programs in orchard ecosystems. The book is a collection of papers from a symposium convened on the subject for the 1977 National Meeting of the Entomological Society of America and invitational papers on commodities not covered during the symposium. In recent years, books have appeared on integrated pest management (IPM); however, most of these have concentrated on field crop IPM with an occasional chapter on fruits. No publication presently exists which brings together information on the pest management programs currently being conducted on the major nut crops: almonds, pecans, and walnuts. Because it is the first treatment for almonds and walnuts, the authors of these chapters have attempted not only to present the current IPM technology but the historical data which led to the contemporary programs. Two chapters appear on pecan IPM. The first concentrates on the development of a management program for the pecan weevil, the key arthropod pest of pecans, while the second discusses the implementation of pilot pecan IPM programs in two southeastern states. The latter chapter illustrates that even with a limited data bank, the pesticide load in pecan orchards can be reduced by the adoption of the IPM approach to pest control.

Introduction to Insect Pest Management Robert L. Metcalf, William H. Luckmann, 1994-07-27

Contributed papers by experts in the field detail how to put integrated pest management to work. Presents the philosophy and practice, ecological and economic background, as well as strategies and techniques including not only the use of chemical pesticides but also biological, genetic, and cultural methods to manage the harm done by insect pests. Covers such key crops as cotton, corn, apples, and forage. This edition reports important advances of the last decade, including an increased environmental and ecological awareness and a trend toward lower chemical pesticide use. Improving integrated pest management in horticulture Prof. Rosemary Collier, 2022-03-15

Reviews the latest research on the advances in IPM strategies for insect and disease control in horticultural crops. Highlights the challenges of using alternative methods of control successfully in IPM programmes, e.g., biopesticides, bioprotectants, biostimulants. Provides examples of the practical implementation of IPM strategies to an array of horticultural crops: cucurbits, tomatoes, potatoes, cabbage, cauliflower, in differing environments, greenhouses, protected cultivation. **Temperate Nut Crops** Ab Waheed Wani, Rajni Rajan, Faheem Ahmad, 2025-09-23
