Fundamental Controls on Fluid Flow in Carbonates S.M. Agar, S. Geiger, 2015-02-02 This volume highlights key challenges for fluid flow prediction in carbonate reservoirs the approaches currently employed to address these challenges and developments in fundamental science and technology The papers span methods and case studies that highlight workflows and emerging technologies in the fields of geology geophysics petrophysics reservoir modelling and computer science Topics include detailed pore scale studies that explore fundamental processes and applications of imaging and flow modelling at the pore scale case studies of diagenetic processes with complementary perspectives from reactive transport modelling novel methods for rock typing petrophysical studies that investigate the impact of diagenesis and fault rock properties on acoustic signatures mechanical modelling and seismic imaging of faults in carbonate rocks modelling geological influences on seismic anisotropy novel approaches to geological modelling methods to represent key geological details in reservoir simulations and advances in computer visualization analytics and interactions for geoscience and engineering

Quantifying Uncertainty in Subsurface Systems Céline Scheidt, Lewis Li, Jef Caers, 2018-06-19 Under the Earth's surface is a rich array of geological resources many with potential use to humankind However extracting and harnessing them comes with enormous uncertainties high costs and considerable risks The valuation of subsurface resources involves assessing discordant factors to produce a decision model that is functional and sustainable This volume provides real world examples relating to oilfields geothermal systems contaminated sites and aquifer recharge Volume highlights include A multi disciplinary treatment of uncertainty quantification Case studies with actual data that will appeal to methodology developers A Bayesian evidential learning framework that reduces computation and modeling time Quantifying Uncertainty in Subsurface Systems is a multidisciplinary volume that brings together five major fields information science decision science geosciences data science and computer science It will appeal to both students and practitioners and be a valuable resource for geoscientists engineers and applied mathematicians Read the Editors Vox eos.org editors.vox.quantifying.uncertainty.about.earths.resources

A Land Before Humans, a Land After Humans Mark Fisher, 2025-02-28 Some species survive reliant on conservation some may survive eluding our knowing some may not survive despite our efforts and some may survive by adapting to and integrating with human worlds New Zealand is a unique and fascinating country as a case study for managing invasive species Because of its history we know a lot about species introductions and because of its geographical position as a relatively small remote island the potential for dealing with invasive species may be more effective than elsewhere Moreover the fragility of its ecosystems makes it relatively easy to see the impact of one species upon another Nature and people shape the country's ecology from its geological and biological beginnings to the relatively recent arrival of people and the changes wrought to the wide ranging efforts of individuals and

communities to protect and enhance treasured species and environments Among them an ambitious Predator Free 2050 initiative to rid the country of some of its unwanted species The issue is a complex and interesting one There are ethical considerations which species are protected and which destroyed How are they destroyed What are the unforeseen consequences There are also tensions between preservation and the use of natural resources and ultimately our relationship to the environment how we live A Land Before Humans a Land After Humans explores these issues An invaluable resource for environment ecology animal welfare and ethics students researchers and policy makers the book takes New Zealand as a case study and looks at the practical and ethical considerations of dealing with invasive species 5m Books Unbreaking

Sediment-Body Geometry and Heterogeneity A.W. Martinus, J.A. Howell, T. Good, 2014-07-28 Over the past 20 years there has been a major growth in efforts to quantify the geometry and dimensions of sediment bodies from analogues to provide quantitative input to geological models The aim of this volume is to examine the current state of the art from both an industry and an academic perspective Contributions discuss the challenges of extracting relevant data from different types of sedimentary analogue outcrop process models seismic and the application and significance of such information for improving predictions from subsurface static and dynamic models Special attention is given to modelling reservoir properties and gridding issues for predicting subsurface fluid flow As such the volume is expected to be of interest to both the geoscience community concerned with the fundamentals of sedimentary architecture as well as geological modellers and engineers interested in how these characteristics are modelled and influence subsurface predictions

Antarctic Krill and Interactions in the East Antarctic Ecosystem So Kawaguchi, Sophie Bestley, Martin Cox, Kerrie M. Swadling, Elanor Bell, 2025-08-19 Antarctic krill *Euphausia superba* is the target of the largest commercial fishery in the Southern Ocean Its abundance varies regionally and exhibits great interannual variability This natural variability combined with climate change effects could have substantial

consequent impacts on krill predators and the magnitude of ecologically sustainable fishery catch limits Recent increase in the krill catch is due to technological developments in both harvesting and catch processing methods as well as interest in new products derived from krill e g dietary supplements and pet food The krill fishery is managed by the Commission for the Conservation of Antarctic Marine Living Resources CCAMLR The krill fishery first commenced in 1970 s off East Antarctica but the main fishing ground shifted to the South Atlantic sector from the 1990 s Interest to fish off East Antarctica has been expressed by CCAMLR Member nations in recent years and the krill fishery recommenced in Indian Ocean sector of East Antarctic sector in the 2016 17 fishing season Given the increase in recent commercial interest the trigger level total allowed catch in one of the management areas CCAMLR Subarea 48 1 has been reached seven times in the Southwest Atlantic the East Antarctic fishery is likely to expand in coming years CCAMLR employs an ecosystem based management approach This requires a wide range of data and information from across regional ecosystem components In the southwest Atlantic sector krill management is based on large scale krill biomass surveys undertaken in 2000 and 2019 together with various national Antarctic programs conducting annual regional scale monitoring this provides assessments of year to year variation of krill ecosystem parameters for CCAMLR to ensure harvesting is carried out in a sustainable manner Contrary to the relatively data rich Southwest Atlantic sector current precautionary catch limits for the krill fishery off East Antarctica are solely based on information collected through the two large scale multidisciplinary surveys conducted by Australia in Divisions 58 4 1 in 1996 and 58 4 2 in 2006 This Research Topic gathers up to date scientific analysis on the East Antarctic ecosystem arising from recent marine science voyages such as ENRICH Euphausiids and Nutrient Recycling In Cetacean Hotspots in 2019 and TEMPO Trends in Euphausiids off Mawson Predators and Oceanography in 2021 Our topic provides an opportunity to explore ecosystem wide scientific studies including non exclusively krill biomass ecosystem structure and interactions between krill krill predators oceanography and primary production to inform sustainable krill fishery management in the region
