You will understand how to benefit from using convolutional neural networks (CNNs) for visual tasks. Hands On Computer Vision with TensorFlow 2 starts with the fundamentals of computer vision and deep learning, teaching you how to build a neural network from scratch. You will discover the features that have made TensorFlow the most widely used AI library, along with its intuitive Keras interface. You'll then move on to building, training and deploying CNNs efficiently. Complete with concrete code examples, the book demonstrates how to classify images with modern solutions such as Inception and ResNet, and extract specific content using You Only Look Once (YOLO), Mask R-CNN and U-Net. You will also build generative adversarial networks (GANs) and variational autoencoders (VAEs) to create and edit images and long short term memory networks (LSTMs) to analyze videos. In the process, you will acquire advanced insights into transfer learning, data augmentation, domain adaptation and mobile and web deployment, among other key concepts. By the end of the book, you will have both the theoretical understanding and practical skills to solve advanced computer vision problems with TensorFlow 2.0. What you will learn Create your own neural networks from scratch. Classify images with modern architectures including Inception and ResNet. Detect and segment objects in images with YOLO, Mask R-CNN and U-Net. Tackle problems faced when developing self-driving cars and facial emotion recognition systems.
