Green Illusions Ozzie Zehner,2012-06 We don't have an energy crisis We have a consumption crisis And this book which takes aim at cherished assumptions regarding energy offers refreshingly straight talk about what's wrong with the way

we think and talk about the problem Though we generally believe we can solve environmental problems with more energy more solar cells wind turbines and biofuels alternative technologies come with their own side effects and limitations How for instance do solar cells cause harm Why can t engineers solve wind power s biggest obstacle Why won t contraception solve the problem of overpopulation lying at the heart of our concerns about energy and what will This practical environmentally informed and lucid book persuasively argues for a change of perspective If consumption is the problem as Ozzie Zehner suggests then we need to shift our focus from suspect alternative energies to improving social and political fundamentals walkable communities improved consumption enlightened governance and most notably women s rights The dozens of first steps he offers are surprisingly straightforward For instance he introduces a simple sticker that promises a greater impact than all of the nation s solar cells He uncovers why carbon taxes won t solve our energy challenges and presents two taxes that could Finally he explores how future environmentalists will focus on similarly fresh alternatives that are affordable clean and can actually improve our well being Watch a book trailer [A Real Goods Solar Living Sourcebook](#) ,1996 [American Book Publishing Record](#) ,1997 [Subject Guide to Books in Print](#) ,2001
