Machine Learning in Document Analysis and Recognition Simone Marinai, Hiromichi Fujisawa, 2007-12-27 The objective of Document Analysis and Recognition DAR is to recognize the text and graphical components of a document and to extract information With first papers dating back to the 1960s DAR is a mature but still growing research field with consolidated and known techniques Optical Character Recognition OCR engines are some of the most widely recognized products of the research in this field while broader DAR techniques are nowadays studied and applied to other industrial and office automation systems In the machine learning community one of the most widely known search problems addressed in DAR is recognition of unconstrained handwritten characters which has been frequently used in the past as a benchmark for evaluating machine learning algorithms especially supervised classifiers However developing a DAR system is a complex engineering task that involves the integration of multiple techniques into an organic framework A reader may feel that the use of machine learning algorithms is not appropriate for other DAR tasks than character recognition On the contrary such algorithms have been massively used for nearly all the tasks in DAR With large emphasis being devoted to character recognition and word recognition other tasks such as pre processing layout analysis character segmentation and signature verification have also benefited much from machine learning algorithms
