

"Is there hope for the future? Yes, as David Boyd has bluntly disseminates, because of the energy and commitment of people who know the problems and take action to solve them. And the sum of the power of the human spirit for good when it is harmonized with the human heart." —JANE GOODALL, PhD, DBE, founder of the Jane Goodall Institute & UN Messenger of Peace

Optimistic Environmentalist, The David R. Boyd, 2015-08-01 A hopeful inspiring and honest take on the environment Yes the world faces substantial environmental challenges climate change pollution and extinction But the surprisingly good news is that we have solutions to these problems In the past 50 years a remarkable number of environmental problems have been solved while substantial progress is ongoing on others The Optimistic Environmentalist chronicles these remarkable success stories Endangered species from bald eagles to gray whales pulled back from the precipice of extinction Thousands of new parks protecting billions of hectares of land and water The salvation of the ozone layer vital to life on Earth The exponential growth of renewable energy powered by wind water and sun The race to be the greenest city in the world Remarkable strides in cleaning up the air we breathe and the water we drink The banning of dozens of the world's most toxic chemicals A circular economy where waste is a thing of the past Past successes pave the way for even greater achievements in the future Providing a powerful antidote to environmental despair this book inspires optimism leading readers to take action and exemplifying how change can happen A bright green future is not only possible it's within our grasp

The Environmental Dilemma, Optimism Or Despair? Lambert N. Wenner, 1997 For countless millenia humans extended their domain around the world gradually using more of nature's resources High death rates from famine disease and other perils restricted population growth Since 1800 innovations in science energy medicine transportation communication farm and factory production marketing beliefs customs and social relationships have drastically altered both natural and cultural environments Globally death rates have fallen dramatically without equivalent reductions in birth rates while per capita consumption of many natural resources has increased Many global trends are unsustainable and prompt action is needed to avoid calamities in the decades ahead Expanding environmental programs mitigate many trends but fail to reverse most of

them Rival factions differ on the costs and benefits of development Some people have grave concerns about pollution waste disposal forest and wetland depletion species extinction crowding food shortages and a resurgence of epidemic diseases but others downplay these fears and oppose regulatory solutions We humans have the technology knowledge and resources to resolve our dilemma but lack the consensus and commitment It is what we accomplish that counts not what we boast of being able to do Failure to act now can cost future generations much more than it would cost now Environmental information is cast and expanding but often highly technical narrowly focused or self serving underscoring the need to summarize integrate and interpret findings for concerned publics **Environmental Optimism in an Apocalyptic Age** Scott T.
