How to Name an Inorganic Substance serves as a guide to the use of nomenclature of inorganic chemistry. This book contains a few references to the rules for the nomenclature of organic chemistry as well as of inorganic boron compounds. This text defines inorganic compounds as substances consisting of combinations of all the elements except those that comprise mainly of certain chains and rings of carbon atoms with defined atoms and groups attached to these skeletal atoms. This book presents as well the background principles involved in or related to nomenclature including oxidation number, coordination number, multiplying affixes, enclosing marks, and use of italic letters. This guide also explains the various types of names used in chemistry including substitutive names, simple binary names, molecular hydride or anion names, and cations derived by proton addition to molecular hydrides. This book is a valuable resource for organic and inorganic chemists.

Inorganic Nomenclature Rodney L. Olsen, 1967 **Properties of Inorganic Compounds** Sidney L. Phillips, 1997-03-27

In recent decades, chemists and material scientists have made tremendous advances in the development and application of inorganic compounds, especially compounds for commercial applications. New compounds have been synthesized, new uses for older compounds have emerged, and new methods in synthesis and manufacturing have been developed. Tracking down critical data about new or newly important inorganic compounds can still be difficult and time consuming. Now scientists and researchers have essential information about 5 000 key compounds at their fingertips in *Properties of Inorganic Compounds*, a flexible, powerful new electronic database. Compounds in the database were carefully selected for their importance in current applications or their potential uses as precursors in preparing materials. For each compound, the database includes fundamental information including numerical values, descriptive data, and information on uses. Even current industry and research trends are included in this complete resource. All this critical data, formerly found in many diverse sources, is now only a keystroke away.

System requirements: IBM 486 or higher compatible computer with 40MB hard disk, 12MB free capacity, 4MB RAM, VGA Monitor, color, MS DOS 3.3 or higher, Windows 3.1 or higher, or Windows 95, external or internal CD ROM drive. Will normally run to a lower performance standard on IBM 386 and on less hard disk and RAM capacity than those stated above.
