services being conveyed in the cloud and the way that much of the time the devices used to get to these services don't require any unique applications. With the help of cloud computing you can utilize programming conveyed through the Internet on the program with no installation. Have an application on the Internet set up your own storage of remote file and database framework and that's just the beginning.

The Web Application Hacker's Handbook Dafydd Stuttard, Marcus Pinto, 2011-09-27

The highly successful security book returns with a new edition completely updated. Web applications are the front door to most organizations exposing them to attacks that may disclose personal information, execute fraudulent transactions, or compromise ordinary users. This practical book has been completely updated and revised to discuss the latest step-by-step techniques for attacking and defending the range of ever-evolving web applications. You'll explore the various new technologies employed in web applications that have appeared since the first edition and review the new attack techniques that have been developed particularly in relation to the client side. Reveals how to overcome the new technologies and techniques aimed at defending web applications against attacks that have appeared since the previous edition. Discusses new remoting frameworks, HTML5 cross-domain integration techniques, UI redress, framebusting, HTTP parameter pollution, hybrid file attacks, and more. Features a companion web site hosted by the authors that allows readers to try out the attacks described, gives answers to the questions that are posed at the end of each chapter, and provides a summarized methodology and checklist of tasks. Focusing on the areas of web application security where things have changed in recent years, this book is the most current resource on the critical topic of discovering, exploiting, and preventing web application security flaws.

[How to utilize the IaaS cloud safely? Developing cloud security for cloud adoption in the Middle East](#)

Haitham Ismail, 2019-03-04

Master's Thesis from the year 2018 in the subject Computer Science / IT Security, grade B. Anglia Ruskin University course. Dissertation language: English.

Abstract: Information Security is very important for businesses and national security of any country. In the Middle East, especially with the current geopolitical tensions and unbalanced situation resulting from terrorism, rising cybersecurity is very important to protect the nation's economy and security. This research investigates with a deep look inside hybrid cloud security deployments, which is new to the Middle East region, with focusing on Infrastructure as a Service (IaaS) security. Furthermore, it assesses the current practice when it comes to cloud data adoption in an IaaS environment, whether it is on premises or hosted by a third party, dedicated or shared across multitenant. This research aims to develop two templates to be followed by IT professionals, whether they have the required expertise for cloud adoption or not, to guide them through the whole data cloud adoption process. According to the risk appetite of the organization and their acceptable risk level, the template is chosen. These templates contain a guide to design the cloud security infrastructures, the placement of information in different IaaS deployment models (e.g., private IaaS, public IaaS, community IaaS, etc.) and what controls are recommended to establish controls and governance in the cloud realm. These templates were developed based on the recommendation and guidelines of the National Institute of Standards and Technology.
