Oil Spill Dispersants Efficacy And Effects:

Oil Spill Dispersants Committee on Understanding Oil Spill Dispersants: Efficacy and Effects, Ocean Studies Board, 2005 Approximately 3 million gallons of oil or refined petroleum products are spilled into U S waters every year Oil dispersants chemical agents such as surfactants solvents and other compounds are used to reduce the effect of oil spills by changing the chemical and physical properties of the oil By enhancing the amount of oil that physically mixes into the water dispersants can reduce the potential that a surface slick will contaminate shoreline habitats Although called for in the Oil Pollution Act of 1990 as a tool for minimizing the impact of oil spills the use of chemical dispersants has long been controversial This book reviews the adequacy of existing information and ongoing research regarding the effectiveness of dispersants as an oil spill response technique as well as the effect of dispersed oil on marine and coastal ecosystems Oil Spill Dispersants also includes recommended steps for policy makers faced with making hard choices regarding the use of dispersants as part of spill contingency planning efforts or during actual spills **Oil Spill Dispersants**, 2005 **Using Oil Spill Dispersants on the Sea** National Research Council, Division on Engineering and Physical Sciences, Commission on Engineering and Technical Systems, Marine Board, Committee on Effectiveness of Oil Spill Dispersants, 1989-01-01 While major oil spills are rare oil slicks can have disastrous environmental and economic consequences This book summarizes research on the use of chemical dispersants their effectiveness and limitations and the results of using them in different spill situations Based on laboratory and field research as well as on actual case histories this book contains a clear cut set of recommendations for action planning and research Of special interest is the chapter on the biological effects of oil itself and of oil treated with chemical dispersants *The Use of Dispersants in Marine Oil Spill Response* National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Ocean Studies Board, Committee on the Evaluation of the Use of Chemical Dispersants in Oil Spill Response, 2020-05-24 Whether the result of an oil well blowout vessel collision or grounding leaking pipeline or other incident at sea each marine oil spill will present unique circumstances and challenges The oil type and properties location time of year duration of spill water depth environmental conditions affected biomes potential human community impact and available resources may vary significantly Also each spill may be governed by policy guidelines such as those set forth in the National Response Plan Regional Response Plans or Area Contingency Plans To respond effectively to the specific conditions presented during an oil spill spill responders have used a variety of response options including mechanical recovery of oil using skimmers and booms in situ burning of oil monitored natural attenuation of oil and dispersion of oil by chemical dispersants Because each response method has advantages and disadvantages it is important to understand specific scenarios where a net benefit may be achieved by using a particular tool or combination of tools This report builds on two previous National Research Council reports on dispersant use to provide a current understanding of the state of science and

to inform future marine oil spill response operations The response to the 2010 Deepwater Horizon spill included an unprecedented use of dispersants via both surface application and subsea injection The magnitude of the spill stimulated interest and funding for research on oil spill response and dispersant use in particular This study assesses the effects and efficacy of dispersants as an oil spill response tool and evaluates trade offs associated with dispersant use Oil Spill Science and Technology Mervin Fingas, 2010-12-03 The National Academy of Sciences estimate that 1.7 to 8.8 million tons of oil are released into world's water every year of which more than 70% is directly related to human activities The effects of these spills are all too apparent dead wildlife oil covered marshlands and contaminated water chief among them This reference will provide scientists engineers and practitioners with the latest methods use for identify and eliminating spills before they occur and develop the best available techniques equipment and materials for dealing with oil spills in every environment Topics covered include spill dynamics and behaviour spill treating agents and cleanup techniques such as in situ burning mechanical containment or recovery chemical and biological methods and physical methods are used to clean up shorelines Also included are the fate and effects of oil spills and means to assess damage Covers spill dynamics and behaviour Definitive guide to spill treating agents Complete coverage of cleanup techniques Includes fate and effects of oil spills and means to assess damage **Oil Spill Response: A Global Perspective** Walter F. Davidson, Kenneth Lee, Andrew Cogswell, 2008-06-20 International experts in the field of oil spill response including representatives from 26 NATO countries participated in a workshop in Canada to discuss their experience in the development and application of current and emerging technologies for oil spill response in the marine environment These presentations which form the basis of chapters in this book provide a practical viewpoint of methods used to deal with oil spills under the variety of environmental conditions found in the marine environment In particular focus is given to the evaluation of oil spill countermeasures for use under arctic conditions in light of anticipated regional increases in marine traffic e.g. Northwest Passage and industrial activities e.g. offshore oil and gas exploration in the future This book provides a timely international perspective on applied research and development technology transfer and lessons learned from field trials and actual case studies associated with recent spill events Topics include Preparedness Contingency Planning Eco terrorism Oil Spill Fate and Transport Environmental Persistence Remote Sensing modelling Biodegradation Biological Effects Environmental Effects Monitoring and Environmental Risk Assessment and Operational Response Containment Recovery Treating Agents Shoreline Cleanup In situ Burning Emerging Response Strategies This book provides a synopsis as to the methods currently employed to deals with spills and an insight on future technologies under development **Deepwater Horizon** United States. Congress. House. Committee on Transportation and Infrastructure, 2010 **Oil Spill Cleanup Agent Efficacy, Toxicity and Biodegradation** R. S. Tjeerdema, 1992 Evaluating the Effectiveness of Offshore Safety and Environmental Management Systems United States. Committee on the Effectiveness of Safety and Environmental Management Systems for Outer

Continental Shelf Oil and Gas Operations,2012 This report recommends that the Bureau of Safety and Environmental Enforcement BSEE take a holistic approach to evaluating the effectiveness offshore oil and the Safety and Environmental Management Systems SEMS programs of gas industry operators According to the report this approach should at a minimum include inspections audits by the operator and BSEE key performance indicators and a whistleblower program SEMS is a safety management system SMS aimed at shifting from a completely prescriptive regulatory approach to one that is proactive risk based and goal oriented in an attempt to improve safety and reduce the likelihood that events similar to the April 2010 Macondo incident will reoccur According to the committee that produced the report it is not possible for a regulator to create a culture of safety in an organization by inspection or audit that culture needs to come from within the organization To be successful the tenets of SEMS must be fully acknowledged and accepted by workers motivated from the top and supported throughout the organization and must drive worker actions The report also notes that BSEE can encourage and aid industry in development of a culture of safety by the way it measures and enforces SEMS The committee believes BSEE should seize this opportunity to make a step change in safety culture by adopting a goal based holistic approach to evaluating the effectiveness of SEMS programs In recommending a holistic approach to evaluating the effectiveness of SEMS programs the report explores in detail the role of SEMS in helping to develop a culture of safety highlights the pros and cons of various methods of assessing the effectiveness of a SEMS program and investigates existing approaches for assessing the SMS programs of various U S and international regulatory agencies whose safety mandates are similar to that of BSEE *Arctic Potential* Rex W. Tillerson,2015 This report was prepared in response to Secretary of Energy Ernest J Moniz s request and provides a comprehensive study that considers research and technology opportunities to enable prudent development of U S Arctic offshore oil and natural gas resources Today there is both increasing interest in the Arctic for economic opportunity and concern about the future of the culture of the Arctic peoples and the environment in the face of changing climate and increased human activity Other nations such as Russia and China are moving forward with Arctic economic development Facilitating exploration and development in the U S Arctic would enhance national economic and energy security benefit the people of the north and the U S as a whole and position the U S to exercise global leadership Despite these benefits there are diverse views on how to balance this opportunity with environmental stewardship *MSRC Workshop Report* ,1993
