 from Uppsala University Library Codex Upsaliensis Graecus 8 Its aim is to contribute to a better understanding of the Late
 Byzantine and post Byzantine miscellaneous book It is argued that multitext books reflect the time and society in which they
 were created A thorough investigation of such books sheds light on the interests and concerns of the scribes owners and
 readers of the books Containing some ninety texts of different character and from different genres Codex Upsaliensis
 Graecus 8 is a complex creation but still an example of a type of book that was common during the Middle Ages and the
 Renaissance This study takes a comprehensive view of the book in its entirety making sense of its different parts in relation
 to the whole with the help of codicology and textual analysis With that approach the original idea of the book is brought to
 the fore and the texts are studied in the same context that the main scribe Theodoros chose and the early owners and readers
 of the book encountered Through a systematic codicological analysis the overall structure of the codex is explored and
 suggestions are made concerning the provenance The examination of the scribal work procedure becomes a means to profile
 this otherwise fairly unknown scribe The texts are grouped and characterized typologically to illustrate connections

throughout the whole book as well as in relation to the separate structural units The role of micro texts and secondary layers of inscription is also considered From the perspective of usability the texts are divided into four categories narrative texts rhetorical texts philosophical theological texts and practical texts Three texts are studied in greater depth as examples of the width of the scribe s interests and the variety of the book s contents

The Renaissance was a ground breaking period in the history of drawing Drawing became an art form in its own right rather than just being used in the preparation of other works of art Prior to 1400 few drawings survive and it is only in the fifteenth century that we can gain an understanding of how and why artists drew The reasons for this are threefold the growth in paper production meant it became more economical to draw the demand by patrons for originality necessitated artists make more studies to explore new compositional ideas and poses and finally a widening interest in collecting meant that drawings were preserved Drawing was an integral part of how Renaissance artists were trained Thanks to this education artists were able to express their ideas with extraordinary fluency on paper The spontaneity and rawness of many of the drawings in this arresting book reveal the minds and working practices of the artists The use of a variety of drawing tools from red chalk to silverpoint shows how expressive a medium drawing could be

Michelangelo, Drawing, and the Invention of Architecture Cammy Brothers,2008 Michelangelo s fame as a painter and sculptor tends to eclipse his reputation as an architect but his impact here was just as profound In this book Cammy Brothers takes an unusual approach to Michelangelo s architectural designs arguing that they are best understood in terms of his experience as a painter and sculptor By following the steps by which Michelangelo arrived at his extraordinary inventions the author questions conventional notions of spontaneity as a function of genius Rather she explores the idea of drawing as a mode of thinking using its evidence to reconstruct the process by which Michelangelo arrived at new ideas By turning the flexibility and fluidity of his figurative drawing methods to the subject of architecture Michelangelo demonstrated how it could match the expressive possibilities of painting and sculpture
