Intimacy and Developing Personal Relationships in the Virtual World Gopalan, Rejani Thudalikunnil, 2018-07-13

Online communication has exploded in the past decade with the development of social networking sites like Facebook as well as social media applications. As more people turn to the online world to connect with others they must learn how to develop and maintain personal relationships with very little or no in person interaction. *Intimacy and Developing Personal Relationships in the Virtual World* sheds light on the various issues that accompany online interactions. The book examines activities that have gone from occurring in reality to taking place in the online world such as cyberbullying, online social networking and online dating. The publication also highlights the negative effects of spending a lot of time online such as mental health issues, internet addiction and body image control. This book is a vital resource for psychiatrists, psychologists, clinicians, social workers, medical administrators, academicians, educators and graduate level students. **Research**

Anthology on Mental Health Stigma, Education, and Treatment Management Association, Information

Resources, 2021-02-05. In times of uncertainty and crisis the mental health of individuals becomes a concern as added stressors and pressures can cause depression, anxiety and stress. Today especially with more people than ever experiencing these effects due to the Covid 19 epidemic and all that comes along with it, discourse around mental health has gained heightened urgency. While there have always been stigmas surrounding mental health, the continued display of these biases can add to an already distressing situation for struggling individuals. Despite the experience of mental health issues becoming normalized, it remains important for these issues to be addressed along with adequate education about mental health so that it becomes normalized and discussed in ways that are beneficial for society and those affected. Along with raising awareness of mental health in general, there should be a continued focus on treatment options, methods and modes for healthcare delivery. The *Research Anthology on Mental Health Stigma, Education, and Treatment* explores the latest research on the newest advancements in mental health, best practices and new research on treatment and the need for education and awareness to mitigate the stigma that surrounds discussions on mental health. The chapters will cover new technologies that are impacting delivery modes for treatment, the latest methods and models for treatment options, how education on mental health is delivered and developed and how mental health is viewed and discussed. It is a comprehensive view of mental health from both a societal and medical standpoint and examines mental health issues in children and adults from all ethnicities and socio-economic backgrounds and in a variety of professions including healthcare, emergency services and the military. This book is ideal for psychologists, therapists, psychiatrists, counsellors, religious leaders, mental health support agencies and organizations, medical professionals, teachers, researchers, students, academicians, mental health practitioners and more.

Actor Models and Digital Natives Tobias Fritsch, 2010-12-30 Master's Thesis from the year 2010 in the subject Sociology Media Art Music grade 1.0 University of Hagen language English abstract This thesis evaluates the role of actor models with regard to the changes in virtual environments The most commonly used actor models the homo economicus and the homo sociologicus as well as the emotional man and several less popular models are compared with regard to their level of explanation for behavior in virtual environment In this context online communities i.e. gaming communities are observed The research framework and the structural conception of the measurement also are explained in detail A significant share of the input is based onto qualitative interviews with eight different digital natives who share a common computer gaming affinity The analysis includes qualitative interviews with these e athletes concerning their behavior within online communities These interviews contain interesting findings about their motivation especially the difference between virtual and real world social relationships The analysis shows interesting results since the players differentiate in between their role as an e athlete versus their role as a person This leads to a multi causal influence for their behavior which cannot solely be explained with a single influence factor Neither the homo economicus nor the homo sociologicus thus can explain their behavior on its own Therefore this thesis discusses methods to improve the current models in order to adopt behavioral changes through virtual environments A trade off between the most commonly models is given Afterwards the results of the analysis are compared to the statements of the interview partners These interviews indicate a strong personal influence from the environment on the role of a private person Additionally the behavior as an e athlete is also influenced by logical decisions which can be modeled through the homo economicus
