Dirt and bugs may be cleaned out of the radiator air passages by blowing out with air pressure from the back of the core.

#### WATER PUMP AND FAN

The water pump (fig. 123) is the ball bearing type and requires no care other than to make certain the air vent at the top of the housing and the drain holes in the bottom do not become plugged with dirt or grease.

The shaft and the double row ball bearings are integral. The bearing is packed with a special high melting point grease at the time of manufacture and requires no further lubrication.

The ends of the bearing are sealed to retain the lubricant and prevent dust and dirt from entering.
