Methods In Comparative Plant Ecology A Laboratory Manual:

Methods in Comparative Plant Ecology G.A. Hendry, J.P. Grime, 1993-01-31 Methods in Comparative Plant Ecology A laboratory manual is a sister book to the widely acclaimed Comparative Plant Ecology by Grime, Hodgson and Hunt. It contains details on some 90 critical concise diagnostic techniques by over 40 expert contributors. In one volume it provides an authoritative bench top guide to diagnostic techniques in experimental plant ecology. **Conserving Plant Genetic**

Diversity in Protected Areas José María Iriondo, Nigel Maxted, Mohammad Ehsan Dulloo, 2008 Conservation in protected areas has focused on preserving biodiversity of ecosystems and species, whereas conserving the genetic diversity contained within species has historically often been ignored. However, maintaining genetic diversity is fundamental to food security and the provision of raw materials and it is best preserved within plants' natural habitats. This is particularly true for wild plants that are directly related to crop species and can play a key role in providing beneficial traits such as pest or disease resistance and yield improvement. These wild relatives are presently threatened due to processes of habitat destruction and change, and methodologies have been adapted to provide in situ conservation through the establishment of genetic reserves within the existing network of protected areas. Providing a long awaited synthesis of these new methodologies, this book presents a practical set of management guidelines that can be used for the conservation of plant genetic diversity of crop wild relatives in protected areas. Functional Plant Ecology Francisco Pugnaire, Fernando Valladares, 2007-06-20 Following

in the footsteps of the successful first edition, Functional Plant Ecology Second Edition remains the most authoritative resource in this multidisciplinary field. Extensively revised and updated, this book investigates plant structure and behavior across the ecological spectrum. It features the ecology and evolution of plant crowns and a Ecology and Management of Giant Hogweed (Heracleum Mantegazzianum) M. Cock, W. Nentwig, H.P. Ravn, M. Wade, 2007 The Giant Hogweed Heracleum mantegazzianum is a pernicious invasive species with significant impact on human health due to its phytotoxic sap. From its native area, the Caucasus, it has spread across Europe, creating serious environmental and health problems. This book, the output of a three year EU project involving 40 European experts, is an authoritative compendium of current knowledge on this amazing invasive plant and will facilitate improved management. It is an invaluable resource for both practitioner and student and covers topics including taxonomy, genetics, reproduction, population ecology and invasion dynamics. It also reviews the possibilities of mechanical, chemical and biological control. Using the Biological Literature Diane

Schmidt, 2014-04-14 The biological sciences cover a broad array of literature types from younger fields like molecular biology with its reliance on recent journal articles, genomic databases and protocol manuals to classic fields such as taxonomy with its scattered literature found in monographs and journals from the past three centuries.
