Khoury, 1999-10-15 Multistage separation processes are essentially the heart and soul of the petroleum petrochemical and chemical industries They yield products as common as gasoline and plastics and those as specialized as medical grade pharmaceuticals Predicting the Performance of Multistage Separation Processes provides chemical engineers with solid information and insights into these processes It reaches beyond fundamental principles to focus on intuitive understanding and practical interpretation To that end it presents numerous examples from a variety of applications effectively demonstrating the performance of processes under varying conditions and the relationship among the different operating variables With major advances in computational techniques for solving complex multistage separation equations a variety of simulation programs have emerged that allow accurate and efficient prediction of multistage separation processes These are valuable and effective tools but are often hampered by a lack of understanding of the fundamentals and limitations of prediction techniques The author addresses these problems and pursues a strategy that decouples the discussion of conceptual analysis and the computational techniques Although Dr Khoury presents mathematical methods in detail he gives special attention to keeping the practical interpretation of the models in focus and emphasizes intuitive understanding He applies graphical techniques and shortcut methods wherever possible and includes industrial practice heuristics about the ranges of operating variables that will work With its updates and the addition of more than 100 new applications problems and solutions Predicting the Performance of Multistage Separation Processes Second Edition is ideal for a methodical study of separation processes and as a reference for the fundamental principles and shortcuts useful to the working professional      **The Third Summer School for Teachers of Chemical Engineering** ,1948      **Fundamentals and Modeling of Separation Processes: Absorption, Distillation, Evaporation, and Extraction** Charles Donald Holland, 1974      **Foundations of Computer-aided Chemical Process Design: Sparse matrices, nonlinear programming, differential equations, software for process flowsheets** Richard S. Chemical Engineering Division,1948      *Computer Programming Examples for Chemical Engineers* George Ross,1987 Written by a chemical engineer rather than by a computer scientist this book fills the gap between texts which teach computer languages or programming methods and chemical engineering texts which omit details of writing programs In order to write a computer program and get it to work general theoretical principles are not enough one has to actually do the job This is done in each case by first taking the reader through a manual calculation then presenting a computer program to perform the same task Explanation of how the program operates is given in some detail Topics discussed in this way include computer flowsheeting interpretation and accessing of results and physical data forward feed multi effect evaporation binary distillation linear programming introduction to finite differences with simple heat exchanger example steady state multi dimensional heat conduction unsteady state heat conduction solution of automatic control problems using finite differences In each case the necessary theory is fully

introduced The programs are written in BASIC an easily learnt moderately powerful language available on both mainframe and desk top computers      *Mathematics of Computation* ,1960\*      **Birmingham University Chemical Engineer** ,1960
