Music And Connectionism:

Music and Connectionism Peter M. Todd, D. Gareth Loy, 1991 Annotation As one of our highest expressions of thought and creativity music has always been a difficult realm to capture model and understand The connectionist paradigm now beginning to provide insights into many realms of human behavior offers a new and unified viewpoint from which to investigate the subtleties of musical experience Music and Connectionism provides a fresh approach to both fields using the techniques of connectionism and parallel distributed processing to look at a wide range of topics in music research from pitch perception to chord fingering to composition The contributors leading researchers in both music psychology and neural networks address the challenges and opportunities of musical applications of network models The result is a current and thorough survey of the field that advances understanding of musical phenomena encompassing perception cognition composition and performance and in methods for network design and analysis Peter M Todd is a doctoral candidate in the PDP Research Group of the Psychology Department at Stanford University Gareth Loy is an award winning composer a lecturer in the Music Department of the University of California San Diego and a member of the technical staff of Frox Inc Contributors Jamshed J Bharucha Peter Desain Mark Dolson Robert Gjerclingen Henkjan Honing B Keith Jenkins Jacqueline Jons Douglas H Keefe Tuevo Kohonen Bernice Laden Pauli Laine Otto Laske Marc Leman J P Lewis Christoph Lischka D Gareth Loy Ben Miller Michael Mozer Samir I Sayegh Hajime Sano Todd Soukup Don Scarborough Kalev Tiits Peter M Todd Kari Torkkola *Connectionist Representations of Tonal Music* Michael R. Connectionist Models of Musical Thinking Harold E. Fiske, 2004 For the past decade Fiske music U of Western Ontario has been using neural network models to test his theory that musical thinking can be described as a hierarchy of progressively more intricate pattern comparison activity and that the resulting musical realizations are limited to only three cognitive category types He describes the development of his theory several related experimental studies and the neural network models he uses to test the theory Neural network methodology can seem daunting he admits so he has tried to keep technical descriptions to a minimum in order to highlight his main goal to describe and test a set of principles that appear to represent the foundation of musical understanding Annotation 2004 Book News Inc Portland OR booknews.com
