Wittgenstein and the Conditions of Musical Communication Hanne Ahonen,2007 This thesis argues against the widely held view that to understand music the listeners must hear musical works and passages as expressive of emotions The

argument developed in the thesis arises from Wittgenstein's later account of language. It is argued that if his later account of the meaning and the understanding of natural language is applied to the case of music then what follows is a version of musical formalism. This is to say that insofar as we can talk about musical communication i.e. the understanding of musical phrases and their semantic content then the grounds of this communication must reside in the conventional rules of a musical system.

*Music Therapy* Betsey King Brunk, 2004

Music therapy is the use of music to address non-musical goals. More and more parents and professionals are finding that music can break down barriers for children with autism in areas such as cognition, communication, and socialization. While music therapists are experienced professionals who create unique interventions, many of the principles of music therapy can be implemented by other therapists, teachers, and parents, even by people who do not consider themselves musical. This book explains how to use the many elements of music to foster communication and teaches you how to adapt music to meet a child's needs. Visual aids and already written songs will get you started. Helpful sections include:

*Models of Musical Communication and Cognition* Marc Leman, 1989

Representation, Cognition, and Communication: Invented Notation in Children's Musical Communication, In a text that seeks to explore the topic of musical communication it seems sensible to devote some thought to the role and function of music notation in musical communication. In this chapter I shall examine the communicative role of invented notation in children's musical experience. The study of children's invented notation has sparked considerable interest in recent years. Researchers have explored the signs and symbols children employ when inventing notations, speculated on what is communicated in children's invented notations, and suggested developmental trajectories in musical cognition from the study of children's invented notations. In this chapter I shall provide an overview of research in the realm of children's thinking as users of invented notation, examine the communicative role of invented notations as initiation into the use of conventional symbolic systems, and/or externalization of musical thinking, and explore the potential relationship of invented notation to other forms of sign-making activity: drawing, writing, using mathematical symbols.
