

Question 4 (15 marks)

In *Nuclear Study Guide 1*, professional knowledge was considered as having three components (Schein, 1972). These can be summarised as follows:

1. an underlying discipline or basic science component
2. an applied science or 'engineering' component
3. a skills and attitudinal component (human factors).

In *Nuclear Study Guide 1* you considered the underlying science and technology for nuclear power generation, and in *Nuclear Study Guide 2* you consider the third level of the hierarchy, human factors.

This hierarchy can be considered for other areas in engineering too. In this question you are asked to suggest and consider two alternative engineering-based industries to nuclear power generation. The first is oil refining and the second is orthopaedic implants, which I hope you will agree can be seen as a specialist branch of engineering, and which I have chosen because it is an area you may have direct or indirect experience of.

- a. Briefly describe the two engineering-based industries identified above.

(6 marks)

Advice and guidance

Your answer to this question should be a brief description of each of these industries such as could serve as an introduction for someone who has not come across them before. At this stage there is no need to explain how the professional knowledge hierarchy applies to these industries.
