Computer Modelling of Seas and Coastal Regions II C. A. Brebbia, L. Traversoni, Luiz C. Wrobel, 1995 The importance of accurately modelling seas and coastal regions is emphasized by the need for a better understanding of their normal behaviour and response to extreme conditions Problems such as pollution of these areas have become a major international concern and the related environmental consequences need further study in order that proper remedial actions can be designed Computer models are an efficient tool to determine the response of water systems in combination with remote sensing and experimental sampling Furthermore once a disaster occurs models can be used to determine its extent and impact and aid the optimization of the use of available resources This book contains the papers presented at the Second International Conference on Computer Modelling of Seas and Coastal Regions held in Cancun Mexico in September 1995 The conference attracted contributions from many different countries covering a multitude of topics and techniques in the areas of shallow water models pollutant transport and dispersion wave propagation coastal erosion littoral drift tidal simulation storm surges estuaries and coastal lakes and lagoons
