Kinect Open Source Programming Secrets Andrew Davison, 2012-05-22 Program Kinect to do awesome things using a unique selection of open source software The Kinect motion sensing device for the Xbox 360 and Windows became the world's fastest selling consumer electronics device when it was released 8 million sold in its first 60 days and won prestigious awards such as Gaming Gadget of the Year Now Kinect Open Source Programming Secrets lets YOU harness the Kinect's powerful sensing capabilities for gaming science multimedia projects and a mind boggling array of other applications on platforms running Windows Mac OS and Linux Dr Andrew Davison a user interface programming expert delivers exclusive coverage of how to program the Kinect sensor with the Java wrappers for OpenNI and NITE which are APIs created by PrimeSense the primary developers of the Kinect's technology Beginning with the basics depth imaging 3D point clouds skeletal tracking and hand gestures the book examines many other topics including Kinect gaming FFAST style gestures that aren't part of standard NITE motion detection using OpenCV how to create gesture driven GUIs accessing the Kinect's motor and accelerometer and other tips and techniques Inside Free open source APIs to let you develop amazing Kinect hacks for commercial or private use Full coverage of depth detection camera and infrared imaging point clouds Kinect gaming 3D programming gesture based GUIs and more Online access to detailed code examples on the author's web site plus bonus chapters on speech recognition beamforming and other exotica [New Geometric Data Structures for Collision Detection and Haptics](#) René Weller, 2013-07-12 Starting with novel algorithms for optimally updating bounding volume hierarchies of objects undergoing arbitrary deformations the author presents a new data structure that allows for the first time the computation of the penetration volume The penetration volume is related to the water displacement of the overlapping region and thus corresponds to a physically motivated and continuous force The practicability of the approaches used is shown by realizing new applications in the field of robotics and haptics including a user study that evaluates the influence of the degrees of freedom in complex haptic interactions New Geometric Data Structures for Collision Detection and Haptics closes by proposing an open source benchmarking suite that evaluates both the performance and the quality of the collision response in order to guarantee a fair comparison of different collision detection algorithms Required in the fields of computer graphics physically based simulations computer animations robotics and haptics collision detection is a fundamental problem that arises every time we interact with virtual objects Some of the open challenges associated with collision detection include the handling of deformable objects the stable computation of physically plausible contact information and the extremely high frequencies that are required for haptic rendering New Geometric Data Structures for Collision Detection and Haptics presents new solutions to all of these challenges and will prove to be a valuable resource for researchers and practitioners of collision detection in the haptics robotics and computer graphics and animation domains **Human-Computer Interaction: Interaction Modalities and Techniques** Masaaki Kurosu, 2013-07-01 The five volume set LNCS 8004 8008

constitutes the refereed proceedings of the 15th International Conference on Human Computer Interaction HCII 2013 held in Las Vegas NV USA in July 2013 The total of 1666 papers and 303 posters presented at the HCII 2013 conferences was carefully reviewed and selected from 5210 submissions These papers address the latest research and development efforts and highlight the human aspects of design and use of computing systems The papers accepted for presentation thoroughly cover the entire field of human computer interaction addressing major advances in knowledge and effective use of computers in a variety of application areas This volume contains papers in the thematic area of human computer interaction addressing the following major topics speech natural language and auditory interfaces gesture and eye gaze based Interaction touch based interaction haptic interaction graphical user interfaces and visualisation Universal Access in Human-Computer Interaction.
