conditionals form a unified class of expressions which share a common semantic core that encodes inferential dispositions Thus rather than represent the world conditionals are devices used to communicate how we are disposed to infer Khoo shows that this theory can be extended to predict the probabilities of conditionals as well as how different kinds of conditionals differ both semantically and pragmatically Khoo s book will make for a significant contribution to the literature on

conditionals and should be of interest to philosophers linguists and computer scientists
