Scholarship in Action: Essays on the Life and Work of Christiaan Snouck Hurgronje (1857-1936) ,2023-02-06 The Dutch scholar Christiaan Snouck Hurgronje 1857 1936 was one of the most famous orientalist of his time He acquired early fame through his daring research in Mecca in 1884 85 masterly narrated in two books and accompanied by two portfolios of photographs As an adviser to the colonial government in the Dutch East Indies from 1889 until 1906 he was on horseback during campaigns of pacification and published extensively on Indonesian cultures and languages Meanwhile he successively married two Sundanese women with whom he had several children In 1906 he became a professor in Leiden and promoted together with colleagues abroad the study of modern Islam meant to be useful for colonial purposes Despite his considerable scholarly political and cultural influence in the first decades of the twentieth century nowadays Snouck Hurgronje has been almost forgotten outside a small circle of specialists since he mainly published in Dutch and German The contributors to this volume each offer new insights about this enigmatic scholar and political actor who might be considered a classic proponent of orientalism Their detailed studies of his life and work challenge us to reconsider common views of the history of the study of Islam in European academia and encourage a more nuanced post orientalist approach with ample attention for cooperation exchange and hybridization Contributors Boys' Life ,1914-10 Boys Life is the official youth magazine for the Boy Scouts of America Published since 1911 it contains a proven mix of news nature sports history fiction science comics and Scouting **Wabash County History Bicentennial Edition 1976, Wabash, Indiana** ,1976 Forward Falcons Janet B. apparently contradictory findings which made a coherent theoretical treatment of shape impossible Pizlo argues that once shape is understood to be unique among visual attributes and the perceptual mechanisms underlying shape are seen to be different from other perceptual mechanisms the research on shape becomes coherent and experimental findings no longer seem to contradict each other A single theory of shape perception is thus possible and Pizlo offers a theoretical treatment that explains how a three dimensional shape percept is produced from a two dimensional retinal image assuming only that the image has been organized into two dimensional shapes Pizlo focuses on discussion of the main concepts telling the story of shape without interruption Appendixes provide the basic mathematical and computational information necessary for a technical understanding of the argument References point the way to more in depth reading in geometry and computational vision
