Appropriate management strategies are therefore needed to limit maintenance costs as well as minimize potential hazards to the aquatic and adjacent environments. Human intervention, ranging from nutrient/pollutant release to physical modifications, has a large impact on sediment quantity and quality and thus on river morphology as well as on ecological functioning. Truly understanding sediment dynamics requires, as a consequence, a multidisciplinary approach. *River Sedimentation* contains the peer-reviewed scientific contributions presented at the 13th International Symposium on River Sedimentation (ISRS 2016, Stuttgart, Germany, 19-22 September 2016) and includes recent accomplishments in theoretical developments, numerical modelling, experimental, laboratory, work-field investigations, and monitoring, as well as management methodologies. **Best Colleges 2025**, 2024 Offers advice for high school students and their families regarding how to find the most suitable colleges to navigate the application process and to pay for a college education. In a colorful magazine style format, *Best Colleges* features interviews with college admissions officers about what to include and to avoid on applications, plus U.S. News extensive and exclusive rankings of U.S. undergraduate programs.
