Multiple Sclerosis Robert M Herndon, MD, 2002-12-01 Knowledge has been described as being like an expanding sphere with the volume of knowledge contacting a surface on the unknown This new comprehensive review of the many fields of basic and clinical research that impact our understanding of multiple sclerosis has its basis in this premise In doing research on MS it is not enough to know clinical neurology or neurochemistry or neuroanatomy or pathology it is important to understand the many other areas that relate to them This volume provides an overview of MS related research and will benefit many investigators in the field and help to advance our efforts to cure this thus far intractable disease It is now more than 160 years since the first clinical pathological descriptions of cases of multiple sclerosis and more than 130 years since the classic clinical description and development of diagnostic criteria by Charcot yet MS remains an enigma After decades of intense effort to find the cause no cause has been clearly identified and the disease remains poorly understood Despite the introduction of immunomodulatory therapies and immunosuppressive regimens MS remains a devastating disease While a great deal of progress has been made much remains to be done Our understanding of the disease remains limited treatments remain inadequate and comprehensive management all too rare This volume is an overview of the basic sciences as they relate to MS and will provide clinicians and investigators a better understanding of the basic aspects of the disease While it is possible to find excellent reviews of almost any aspect of MS few attempts have been made to bring these very different aspects together in a single source This volume is a companion to Multiple Sclerosis Diagnosis Medical Management and Rehabilitation edited by Drs Jack S Burks and Kenneth P Johnson Together they represent an attempt to comprehensively cover the field of MS from basic research to comprehensive management and to provide a broad overview for those interested in understanding the disease better or in pursuing MS research **Respiratory Infections in Allergy and**

Asthma Sebastian L. Johnston, Nikolaos Papadopoulos, 2003-06-04 This reference presents investigations into the role of respiratory infections in protecting against allergy and asthma development the activation of airway inflammation and exacerbations of asthma exploring cellular and molecular mechanisms as well as factors including genetics the environment and allergen exposure *Viral Safety and Evaluation of Viral Clearance from Biopharmaceutical Products* Fred Brown, Anthony S. Lubiniecki, 1996 Assurance that biopharmaceuticals do not contain unwanted infectious agents is a vital safety consideration in the use of these products This can only be ensured by careful screening of the cells and other materials used in their production and subsequent testing of the final product This publication reports the proceedings of an international conference which focused on the methods of how to avoid contamination of cell cultures with virus during the production process of biologicals with the aim of providing harmonized guidelines to ensure product safety Scientists from industry and regulatory agencies present updates on the current state of knowledge about assays for viral contamination and procedures for inactivation and removal Risks associated with the processing of biopharmaceuticals are identified and data

on the actual experiences of testing and industrial laboratories are presented and discussed in the context of the clinical setting Drawing together a wealth of new data this book will be essential reading for all scientists concerned with the development production and quality control of biopharmaceutical products
