Palaeohydrology Jürgen Herget,Alessandro Fontana,2019-06-29 The book provides a review of the most relevant topics on the booming discipline of palaeohydrology and focuses on previous extreme events like exceptional floods and droughts. Reviews written by leading experts of their fields are combined with selected key studies and presentations on up to day methodical and conceptional topics as a perspective for further research. Consequently the compilation provides an excellent review on the state of the art of numerous relevant topics of palaeohydrology and acts as unique introduction for early career scientists and scientists of different disciplines working on hydrological extreme events both in basic research and applied aspects

**Martian Geomorphology** Matthew R. Balme,2011 The latest Mars missions are returning data of unprecedented fidelity in their representation of the martian surface. New data include images with spatial resolution better than 30 cm per pixel stereo imaging derived terrain models with one meter postings high resolution imaging spectroscopy and RADAR data that reveal subsurface structure. This book reveals how this information is being used to understand the evolution of martian landscapes and includes topics such as fluvial flooding permafrost and periglacial landforms debris flows deposition and erosion of sedimentary material and the origin of lineaments on Phobos the larger martian moon

Contemporary remote sensing data of Mars on a par with those of Earth reveal landscapes strikingly similar to regions of our own planet so this book will be of interest to Earth scientists and planetary scientists alike. An overview chapter summarising Mars climate geology and exploration is included for the benefit of those new to Mars

*Treatise on Geomorphology* ,2013-02-27 The changing focus and approach of geomorphic research suggests that the time is opportune for a summary of the state of the discipline. The number of peer reviewed papers published in geomorphic journals has grown steadily for more than two decades and more importantly the diversity of authors with respect to geographic location and disciplinary background geography geology ecology civil engineering computer science geographic information science and others has expanded dramatically. As more good minds are drawn to geomorphology and the breadth of the peer reviewed literature grows an effective summary of contemporary geomorphic knowledge becomes increasingly difficult. The fourteen volumes of this *Treatise on Geomorphology* will provide an important reference for users from undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic. Information on the historical development of diverse topics within geomorphology provides

context for ongoing research discussion of research strategies equipment and field methods laboratory experiments and numerical simulations reflect the multiple approaches to understanding Earth's surfaces and summaries of outstanding research questions highlight future challenges and suggest productive new avenues for research Our future ability to adapt to geomorphic changes in the critical zone very much hinges upon how well landform scientists comprehend the dynamics of Earth's diverse surfaces This Treatise on Geomorphology provides a useful synthesis of the state of the discipline as well as highlighting productive research directions that Educators and students researchers will find useful Geomorphology has advanced greatly in the last 10 years to become a very interdisciplinary field Undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic will find the answers they need in this broad reference work which has been designed and written to accommodate their diverse backgrounds and levels of understanding Editor in Chief Prof J F Shroder of the University of Nebraska at Omaha is past president of the QG G section of the Geological Society of America and present Trustee of the GSA Foundation while being well respected in the geomorphology research community and having won numerous awards in the field A host of noted international geomorphologists have contributed state of the art chapters to the work Readers can be guaranteed that every chapter in this extensive work has been critically reviewed for consistency and accuracy by the World expert Volume Editors and by the Editor in Chief himself No other reference work exists in the area of Geomorphology that offers the breadth and depth of information contained in this 14 volume masterpiece From the foundations and history of geomorphology through to geomorphological innovations and computer modelling and the past and future states of landform science no stone has been left unturned

### **Terraforming Mars**

Martin Beech,Joseph Seckbach,Richard Gordon,2021-12-09 TERRAFORMING MARS This book provides a thorough

scientific review of how Mars might eventually be colonized industrialized and transformed into a world better suited to human habitation The idea of terraforming Mars has in recent times become a topic of intense scientific interest and great public debate Stimulated in part by the contemporary imperative to begin geoengineering Earth as a means to combat global climate change the terraforming of Mars will work to make its presently hostile environment more suitable to life especially human life Geoengineering and terraforming at their core have the same goal that is to enhance or revive the ability of a specific environment to support human life society and industry The chapters in this text written by experts in their respective fields are accordingly in resonance with the important and ongoing discussions concerning the human stewardship of global climate systems In this sense the text is both timely and relevant and will cover issues relating to topics that will only grow in their relevance in future decades The notion of terraforming Mars is not a new one as such and it has long played as the background narrative in many science fiction novels This book however deals exclusively with what is physically possible and what might conceivably be put into actual practice within the next several human generations Audience Researchers in planetary science astronomy astrobiology space engineering architecture ethics as well as members of the space industry

**The Mystery of the Great Flood Confirmed** Elsar Orkan,2010 Forget everything you think you know about global warming Thats because The Mystery of the Great Flood changes everything This breakthrough book outlines for the first time a remarkable scientific explanation for the worsening global warming threat In clear lucid prose Dr Elsar Amos Orkan outlines a breathtaking theory of the Earths violent past which set in motion a devastating change in solar radiation that promises to wipe out civilization if we dont do something about it This incredible theory finds evidence of a deep space collision between Earth and Mars 10 000 years ago The impact recorded in crater evidence that survives to this day sent the Earth reeling closer toward the sun putting it in the path of greatly increased solar radiation Its that change and not human activity that has led to the very real warming phenomenon Dr Orkan finds Unfortunately the scientific communitys blind acceptance of so called global warming facts is distracting our best minds from working to solve the problem In The Mystery of the Great Flood Dr Orkan explores the convincing evidence and calls upon the great thinkers of the world to find the solution before it is too late

**Planetary Geoscience** Harry Y. McSween, Jr,Jeffrey E. Moersch,Devon M. Burr,William M. Dunne,Joshua P. Emery,Linda C. Kah,Molly C. McCanta,2019-07-11 For many years planetary science has been taught as part of the astronomy curriculum from a very physics based perspective and from the framework of a tour of the Solar System body by body Over the past decades however spacecraft exploration and related laboratory research on extraterrestrial materials have given us a new understanding of planets and how they are shaped by geological processes Based on a course taught at the University of Tennessee Knoxville this is the first textbook to focus on geologic processes adopting a comparative approach that demonstrates the similarities and differences between planets and the reasons for these Profusely illustrated and with a wealth of pedagogical features this book provides an ideal capstone course for

geoscience majors bringing together aspects of mineralogy petrology geochemistry volcanology sedimentology  
geomorphology tectonics geophysics and remote sensing     Life And Death On Mars John Brandenburg, Ph.D., 2011-03-10  
Mass Extinction and Nuclear Catastrophe on Mars Astrophysicist Brandenburg says that everything you have been taught  
about Mars is wrong The terrible truth Mars was actually Earthlike for most of its geologic history Mars held a massive and  
evolving biosphere Mars was the wracked by a mysterious and astonishing nuclear catastrophe We are biologically and  
culturally the Children of Mars Chapters include Oasis Earth The School of Mars The Dream of Mars The Vikings of Mars The  
Oxygen of Mars The Paleo Ocean of Mars The Crystal Palace of Mars The Chixulube of Mars The New Mars Synthesis The  
Twilight of Mars Endgame of Mars The Moons of Mars The Epilogue of Mars more Includes an 8 page color section

**SuperMars** Ellis Silver, 2021-01-25 In Humans Are Not From Earth ecologist and environmentalist Dr Ellis Silver proved  
we couldn't have evolved on this planet Now he looks at where we really came from and where we might be heading A Mars  
like planet would suit us better than the Earth so why did we end up here on the wrong planet Could there be another planet  
Mars in another solar system or another galaxy Could our ancestors still be living there Could we find it and live there too We  
only have a few hundred million years left on Earth As the Sun grows hotter the plants will die and the planet will become  
uninhabitable Mars could become our home for the next five billion years In fact it will have to we have no choice But when  
the Sun expands into a red giant and consumes the inner planets Mars will become red hot And then what This far reaching  
book looks at our real history including our evolution on another planet and our arrival on Earth and the many changes we've  
undergone since we settled here There's a detailed comparison of Earth Mars and our original home planet And then we take  
a fascinating look at our possible future from terraforming Mars colonizing frozen moons and building artificial worlds to  
planet hopping in other star systems and maybe surviving the end of the universe     **Dead Mars, Dying Earth** John E.
