Optimal Radar Tracking Systems:

Optimal Radar Tracking Systems George Biernson, 1990-04-03 Provides a state of the art presentation of optimal radar tracking systems based on the sophisticated Altair radar which uses Kalman filtering to perform optimal long range tracking of ballistic missile warheads. This engineering example offers a means for explaining Kalman filter theory and many other technical issues critical to the design of a modern optimal radar tracking system all in a relatively simple manner. Material includes discussion of feedback control modulation and demodulation of signals, digital sampled data systems, digital computer simulation, statistical analysis of random signals, detection and tracking processes in a radar system. This study of Altair features a considerable amount of detail concerning the operation of a complex electronic system thereby presenting a study that is unusual in the unclassified literature.

Statistical Methods in Control & Signal Processing Tohru Katayama, Sueo Sugimoto, 2018-10-08 Presenting statistical and stochastic methods for the analysis and design of technological systems in engineering and applied areas this work documents developments in statistical modelling, identification, estimation and signal processing. The book covers such topics as subspace methods, stochastic realization, state space modelling and identification and parameter estimation.

Mechanics and Control R.S. Guttalu, 2012-12-06 The Workshop on Control Mechanics has been held at the University of Southern California annually since 1988 under the leadership of late Professor Janislaw M Skowronski. The primary goal of Professor Skowronski in organizing this series of work shops was to promote the use of advanced mechanics method in control theory with a special emphasis on the control of nonlinear mechanical systems subject to uncertainty. This goal has been achieved through a consistent participation of a large number of researchers in the field of control and mechanics and an intensive exchange of their ideas. Professor Skowronski passed away unexpectedly on March 21 1992 after the conclusion of the Fifth Workshop. The great success of the Fifth Workshop as well as the entire Control Mechanics Workshops over the years is almost exclusively due to his dedication, enthusiasm and organizational capabilities. His untimely demise is a great loss to us and to the mechanics and control community. The proceedings of the Fifth Workshop presented in this volume are dedicated to Professor Angelo Miele one of the pioneers and a leading contributor in many fields of control theory and its applications. His contribution spans a wide range of topics such as optimization theory, flight mechanics, astrodynamics, ocean engineering and numerical methods. The presentations in the workshop reflected many of the areas in which Professor Miele has been active. The papers included in this volume are divided into three major groups of topics.

Analysis and Synthesis Techniques in Complex Control and Dynamic Systems C. T. Leondes, 1994-01-01 Analysis and Synthesis Techniques in Complex Control and Dynamic Systems presents articles on control and dynamic systems. The book covers articles on FE and BE combined techniques in structural analysis and optimization, simultaneous optimization of structure and robust control and techniques in reduced order dynamic compensator design for stability robustness of linear discrete time systems. The text also includes articles about robust
