Dynamics and Control of Process Systems 2004 Sirish Shah, John F. MacGregor, 2005-06-10      **Practical Chemical Process Optimization** Ioannis K. Kookos, 2022 This text provides the undergraduate chemical engineering student with the necessary tools for problem solving in chemical or bio engineering processes In a friendly simple and unified framework the exposition aptly balances theory and practice It uses minimal mathematical concepts terms algorithms and describes the main aspects of chemical process optimization using MATLAB and GAMS Numerous examples and case studies are designed for students to understand basic principles of each optimization method and elicit the immediate discovery of practical applications Problem sets are directly tied to real world situations most commonly encountered in chemical engineering applications Chapters are structured with handy learning summaries terms and concepts and problem sets and individually reinforce the basics of particular optimization methods Additionally the wide breadth of topics that may be encountered in courses such as Chemical Process Optimization Chemical Process Engineering Optimization of Chemical Processes are covered in this accessible text The book provides formal introductions to MATLAB GAMS and a revisit to pertinent aspects of undergraduate calculus While created for coursework this text is also suitable for independent study A full solutions manual is available to instructors who adopt the text for their course      Advanced Control of Chemical Processes , 1991

Nonequilibrium Thermodynamics Yasar Demirel, 2007-10-10 Natural phenomena consist of simultaneously occurring transport processes and chemical reactions These processes may interact with each other and lead to instabilities fluctuations and evolutionary systems This book explores the unifying role of thermodynamics in natural phenomena Nonequilibrium Thermodynamics Second Edition analyzes the transport processes of energy mass and momentum transfer processes as well as chemical reactions It considers various processes occurring simultaneously and provides students with more realistic analysis and modeling by accounting possible interactions between them This second edition updates and expands on the first edition by focusing on the balance equations of mass momentum energy and entropy together with the Gibbs equation for coupled processes of physical chemical and biological systems Every chapter contains examples and practical problems to be solved This book will be effective in senior and graduate education in chemical mechanical systems biomedical tissue biological and biological systems engineering as well as physical biophysical biological chemical and biochemical sciences Will help readers in understanding and modelling some of the coupled and complex systems such as coupled transport and chemical reaction cycles in biological systems Presents a unified approach for interacting processes combines analysis of transport and rate processes Introduces the theory of nonequilibrium thermodynamics and its use in simultaneously occurring transport processes and chemical reactions of physical chemical and biological systems A useful
