# Flexography, Offset Lithography and Printing Processes Exam Questions and Answers

**What is Flexography?** Answer - This is a relief printing process and is sometimes called rotary letterpress. The printing plate is made from a polymer material using a photographic process.

**What are the Flexography Plates made out of?** Answer - The flexible polymer plate is wrapped around a cylinder. The process is very similar to lino printing. A plate is made for each colour used.

**What is Offset Lithography?** Answer - This is one of the most common printing processes

**What is the Offset Lithography process?** Answer - The process uses a thin aluminium printing plate wrapped around a cylinder.

The printing plate uses a photo sensitive emulsion which attracts the ink

The plate is made wet and only the emulsion can attract the ink - it will not stick to the areas where there is no emulsion

The image is transferred to the offset or blanket cylinder

The paper or card passes between the offset cylinder and the impression cylinder and picks up the image

**What are Lithography plates?** Answer - They are made from thin aluminium coated with a light sensitive emulsion. Exposure to light hardens the emulsion. Areas not exposed to light can be washed away.

**What does full Colour Lithographic printing involve?** Answer - involves the paper being passed through four different printing plates .

**What four colour plates need to be created for Full colour printing?** Answer - cyan, magenta, yellow and black.

**How is a full colour image separated?** Answer - It can be separated into cyan, magenta, yellow and black so that a printing plate can be produced for each.
