This text will synthesize and integrate osteopathic models in an easy to understand way a subject often daunting to students and confusing to graduates.

Composed of four sections the first is a discussion of basic principles the second focusses on models and diagnosis of treatment which is followed by anatomical neurophysiological and osteopathic considerations. The last section describes clinical case studies to enable students to put into practice the theories and models which they have learned. This book is essential reading for all osteopathic BSc degree courses and a core textbook for undergraduate students. At the end of each section there will be clinical examples for students to work on to integrate previous knowledge. Key point boxes
